MR #: MR01483046
Acct: ~~FH0127906118~~
Service Date: 10/17/22
Report#: 1017-00133

Fax:

Procedure(s): MR angio neck wo con 70547
Accession # A0001304501F

cc: ~

Exam: MRA Neck

Indication: Acute memory loss

Comparison: None available.

Technique: Utilizing a high-field MR scanner, an MR angiogram of the neck was performed without intravenous contrast using 3-D time of flight protocol. Multiplanar post-processing is performed on an independent workstation with 3-D rendering.

Findings:

The visualized parts of the aortic arch are unremarkable. The origins of the brachiocephalic, left carotid and left subclavian arteries are unremarkable.

The common, internal and external carotid arteries are unremarkable without significant stenosis, dissection or aneurysm.

The bilateral vertebral arteries demonstrate no evidence of significant stenosis, dissection or aneurysm.

ORDER #: 1017-0033 MR/MR angio neck wo con
Impression:

No evidence of stenosis, dissection or aneurysm in the carotid artery systems.

Note: Measurement of carotid stenosis is based on velocity parameters that correlate the residual internal carotid diameter with that of the more distal vessel in accordance with North American Symptomatic Carotid Endarterectomy Trial (NASCET).

If you are a provider and would like to contact the interpreting physician or one of the staff members, please call (626) 244-8200. For patients who have

cc: ~

Exam: MRI Brain

Indication: Acute memory loss, amnesia

Comparison: None available.

Technique: Utilizing a high-field MR scanner, an MRI of the brain was performed without intravenous contrast using multiple sequences in multiple planes.

Findings:

The lateral ventricles are dilated, somewhat out of proportion to third and fourth. There is a 1.7 x 1.6 cm round structure along the anterior midline falx, abutting and slightly compressing the roof of the third ventricle. The structure demonstrates layering T1/T2 attenuation. There is no midline shift. There is no extra-axial fluid collection. There is no evidence of acute intracranial hemorrhage.

There is no evidence of restricted diffusion to suggest acute infarct. There is mild nonspecific periventricular white matter T2/FLAIR hyperintensity probably secondary to chronic small vessel ischemic disease.

The basal ganglia and thalami are unremarkable. The brainstem and cerebellum are within normal limits.

The sellar and parasellar regions are unremarkable.

The visualized paranasal sinuses are clear. The mastoid air cells are clear. The orbits are unremarkable.

The bony calvarium is unremarkable. The soft tissues of the scalp are unremarkable.

1. No evidence of acute intracranial hemorrhage, midline shift or mass effect.
No evidence of acute infarct.

2. There is a 1.7 x 1.6 cm round cystic structure abutting the roof of the third ventricle compatible with colloid cyst. There is compression of the third ventricle with dilated appearance of the lateral ventricles with periventricular FLAIR hyperintensity, concerning for obstructing hydrocephalus.

If you are a provider and would like to contact the interpreting physician or one of the staff members, please call (626) 244-8200. For patients who have questions in regard to this examination, please contact your referring doctor directly.

Procedure(s): MR angio neck wo con 70547
Accession # A0001304501F

cc: ~

Exam: MRA Neck

Indication: Acute memory loss

Comparison: None available.

Technique: Utilizing a high-field MR scanner, an MR angiogram of the neck was performed without intravenous contrast using 3-D time of flight protocol. Multiplanar post-processing is performed on an independent workstation with 3-D rendering.

Findings:

The visualized parts of the aortic arch are unremarkable. The origins of the brachiocephalic, left carotid and left subclavian arteries are unremarkable.

The common, internal and external carotid arteries are unremarkable without significant stenosis, dissection or aneurysm.

The bilateral vertebral arteries demonstrate no evidence of significant stenosis, dissection or aneurysm.

ORDER #: 1017-0033 MR/MR angio neck wo con
Impression:

No evidence of stenosis, dissection or aneurysm in the carotid artery systems.

Note: Measurement of carotid stenosis is based on velocity parameters that correlate the residual internal carotid diameter with that of the more distal vessel in accordance with North American Symptomatic Carotid Endarterectomy Trial (NASCET).

If you are a provider and would like to contact the interpreting physician or one of the staff members, please call (626) 244-8200. For patients who have

General

Chief complaint: Altered Mental Status
Stated complaint: SUDDEN LOSS OF MEMORY
Date Seen: 10/17/22
Source: patient and family
Mode of Arrival: Ambulatory
Limitations: no limitations

History of Present Illness

HPI narrative:

61 year old female with history of DM, HTN, and hypothyroidism presents to the ED for evaluation of sudden onset of memory loss for past 2 days. Family reports that patient is unable to recall current events and noted to be repetitive. Patient remembers briefly what she did 2 days ago, but cannot recall what she did yesterday. Patient was walking stiff 2 days ago according to family. She endorses her head hurting her as well recently. Patient has been very fatigued for 2 days. Patient denies fever, chills, vision/hearing changes, chest pain, SOB, cough, abdominal pain, N/V/D, numbness or weakness.

Exam

Narrative:

Exam Narrative:

General: NAD, alert, awake

HENT: Normocephalic, no signs of dehydration, throat clear

Eyes: Normal visual acuity, EOMI, PERRL, no scleral icterus, no conjunctival pallor

Neck: Normal inspection, no masses, supple, no meningeal signs

Respiratory: No respiratory distress, breath sounds normal, lungs clear

Cardiovascular: RRR, Radial pulses symmetric, pulses normal, heart sounds normal without murmurs Gastrointestinal: Soft, non-tender, non-distended, no pulsatile masses

Back: Normal inspection Skin: Normal color, warm, dry, no rash noted

Extremities: Normal appearance, full ROM

Psych: Mood normal, AOx3, no recollection of events yesterday

Neuro: Cranial nerves II-XII intact, sensation intact to light touch, motor power 5/5 in all extremities, cerebellar: finger to nose intact, heel to shin normal, DTR 2+ at the knees/elbows

Medical Decision Making

MDM Narrative

Medical decision making narrative:

0810: Initial exam was done and plan of treatment discussed. Will order EKG, labs, MR angio head, MR angio neck and MRI brain.

0927: Glucose is 321.

1005: CBC is normal.

1030: CMP shows mild hyponatremia. Glucose of 323. LFT's and troponin are normal.

1045: Discussed case with Dr. Sanchez who states that if workup is negative, then she can follow as an out patient. Dr. Sanchez recommends starting patient on low dose aspirin and atorvastatin.

1050: Brain MRI shows no evidence of acute intracranial hemorrhage, midline shift or mass effect. No evidence of acute infarct. There is a 1.7 x 1.6 cm round cystic structure abutting the roof of the third ventricle compatible with colloid cyst. There is compression of the third ventricle with dilated appearance of the lateral ventricles with periventricular FLAIR hyperintensity, concerning for obstructing hydrocephalus. MR angio head shows Head MRA 10/17/22 08:20

Impression:

No evidence of large vessel occlusion, flow-limiting stenosis or aneurysm in the intracranial circulation.

If you are a provider and would like to contact the interpreting physician or one of the staff members, please call (626) 244-8200. For patients who have questions in regard to this examination, please contact your referring doctor directly.

Neck MRA 10/17/22 08:20

Impression:

No evidence of stenosis, dissection or aneurysm in the carotid artery systems.

At [insert time], patient is feeling better after receiving treatments in the ED. I updated the patient on [lab and imaging results.] Patient was advised to follow up with primary care physician in 2-3 days or return to the ED for worsening symptoms or condition. I personally discussed return precautions with the patient. Patient fully understands reasons to return.

Final Diagnosis

THIRD VENTRICULAR TUMOR (RESECTION)
- MINUTE FRAGMENT OF GLIAL TISSUE AND KERATIN DEBRIS/ANUCLEAR SQUAMES (SEE COMMENT).

COMMENT: This patient's history of cystic lesion is noted. The material is minute and no definitive lining cells are seen. Pancytokeratin immunohistochemical stain performed at Foothill Presbyterian Hospital, Glendora CA, with appropriate controls, shows no additional lining cells, but the keratinaceous debris is positive. There is no evidence of malignancy in the submitted material.

The differential includes epidermoid cyst, colloid cyst, and Rathke cleft cyst.
Clinical correlation is recommended.

This case was reviewed by Dr. Jin Guo who concurs with the above diagnosis.

Any immunoperoxidase stains reported above were developed and the performance determined by Foothill Presbyterian Hospital. They have been cleared by the FDA, although such approval is not required for analyte-specific reagents of this type.

Dictated by: Sunanda J Chatterjee, MD PhD

Clinical History

Hydrocephalus

Gross Description

The specimen is received in 10% neutral buffered formalin labeled "third ventricular tumor" and consists of multiple tiny pieces of tan-brown material measuring 0.2 x 0.2 x 0.1 cm. The specimen is filtered and entirely submitted in one cassette. (EW:SC)

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hypernatremia
Diabetes type 2
hypotension
UTI

Concerning for evolving brain dead. Not Ready to do any testing as still has spontaneous Breathing
Status post VP shunt not working appropriately with concerning for persistent hydrocephalus. Family
is aware. Prognosis extremely poor
Blood Flow study shows no blood flow , But still has some brain stem activity, most likely will Proceed
to brain death or in vegetative status
Nephrology management of fluid status and sodium
Continue mechanical ventilation support
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140,
Family does not want One legacy , But patient was registered , Risk management to Follow
Neurosurgery F/U
SCDs for thromboprophylaxis
correct hypernatremia , Nephro Following , May need DDAVP
tube feeding
Per neurosurgery- - Likely has a partially functioning shunt which limits extent of elevated ICPs and
further brainstem herniation

Subjective

Subjective

Progress Note Date: 12/01/22

Interval history:

looks poor

Exam

Narrative: Exam Narrative:
Exam Narrative:
General: Intubated orally
ENT: Eyes are normal to inspection. Pupils dilated, and non reactive , Neg corneals
Neck: Normal inspection. Full range of motion.
Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present. Breathing over the set rate
Cardiovascular: Regular rate and rhythm. S1S2 present.
Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
Neuro: Bilateral pupil dilated fixed no gag does not withdraw to any painful noxious stimuli. Patient is off all sedation

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical

Plan

ASSESSMENT:

DMT2 ID. Hi FBS with lab probably lab error, all other BG are in the 100s.
Hypothyroidism.
Colloid cyst of third ventricle.
Acute hypoxic respiratory failure
Obstructive hydrocephalus.
Intraventricular hemorrhage.
Hyponatremia
Status post VP shunt.
Status post trach and PEG.

PLANS:

Continue with present Tube feeding.
Sliding scale.
Synthroid 112 mcg QD.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
No hypoglycemia. On Vent. On tube feeding but often on hold due to Hi residual.

Exam

Narrative

Exam Narrative:

People 6 millimeters and nonreactive bilaterally

Left eye open spontaneously

Flexes bilateral lower extremities to pain

No movement of upper extremities to pain

No commands

Does not regard examined

Shunt valve no longer primes.

Const

General: no acute distress and well developed

Other:

Female patient, lying in bed, intubated and not sedated, however patient is unresponsive

HENMT

Head: normocephalic and atraumatic

Mouth: moist mucous membranes

Other:

People 6 millimeters and nonreactive bilaterally

Left eye open spontaneously

Eyes

Pupils: PERRL

EOM: EOM intact bilaterally

Neck

Neck: no lymphadenopathy, no meningeal signs and no JVD

Resp

Effort & Inspection: normal respiratory effort

Auscultation: clear to auscultation bilaterally

Other:

Med/Rec Number: MR01483046 **Account Number:** QH0054940416 **Infect Disease - Progress Note**

Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Rate: regular rate
 Rhythm: regular rhythm
 Heart Sounds: S1 normal and S2 normal
 Other:
 Regular rate and rhythm, S1/S2 present

GI

Palpation: soft (Nontender, nondistended)

Skin

General skin exam: no rashes or lesions noted

Neuro

Cranial Nerves: CN's II-XII intact bilaterally
 Motor: muscle tone normal throughout and strength 5/5 throughout
 Other:

Trached, eyes open to light stimulation R>L, right pupil reactive, left pupil non-reactive, positive right corneal, no left corneal, +cough, trace withdrawal to stimulation RUE/RLE, no movements LUE

Extrem

General: full ROM and no clubbing, cyanosis or edema

Other:

Flexes bilateral lower extremities to pain
 No movement of upper extremities to pain

Psych

Other:

Mood and affect normal

Plan

61 y/o F w/ 3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, s/p VPS insertion

cont. ICU

cont. IV keppra for seizure ppx

pupils fixed, no gag reflex -> neurologically poor prognosis d/w family

breathing over the vent => not brain dead

NM brain blood flow consistent with brain dead

appreciate neurology input, no higher cortical function seen

Hypernatremia

central DI

- goal sodium 150-155

- start DDAVP and D5

- renal following

Leukocytosis due to possible aspiration vs VAP

follow blood/sputum cultures

on empiric zosyn per ID

levophed for shock

anasarca

GI ppx: pepcid

DVT ppx: SCD given ICH

Poor prognosis

Dispo:

11/28 I spoke with patient sister and brother over the phone. Dr. Sandhu has contacted them that patient is not declared brain death that yet due to still have some brainstem function (over breathing vent). We will involve Neurology to help us to make a more clear diagnosis. I introduce myself to the sister again as she remember me from our prior conversation at the beginning of the month regarding her disability form. She and her brother are very upset with 1 Legacy and would not want her organs to be harvest whether she is brain dead or not. I found her advanced directive in the chart and noted that sister is the decision maker including organ donation decision. I spoke with Dr. Sanchez from Neurology to evaluate the patient. I also spoke with the representative from 1 Legacy and asked them to not contact the patient's family for now and I informed them about patient's family's decision about not donating organ.

11/30

I have a long face to face conversation with patient's brother and sister Mary Ellen. They are very frustrated about patient's situation. They shared with me she was a lively person who was a 3rd grade teacher and also involved in community work to help others. They have guilt because they are the one who convince patient to get the surgery at the end. They are also very confused about her diagnosis. We discussed death, brain dead and her picture. She is not demonstrating any higher level cortical function but still have residual brain stem function so she is not brain dead yet. However we

Emanate Health Queen of the Valley Hospital
Patient: Lyons, Kathleen A Date of Birth: 07/13/1961

Med/Rec Number: MR01483046 Account Number: QH0054940416 Internal Med Progress Note

are not expecting her to recover and likely she will get worse and become brain dead. They are catholic and they explained they are not comfortable with withdrawing care, which is against their religion. However they also do not want to lengthen her suffering. They have decided to continue but cap current treatment. **Will not add new medication, will not increase pressor dose, no dialysis, no pacemaker. Discussed with ICU RN and Dr Sandhu.**

Anticipate not surviving this hospitalization.

Internal Medicine - PN: Subj

Subjective

Interval history:

Patient seen and examined. BP is dropping now SBP in 60-70s. RR around 16-17. Minimal urine output.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

Concerning for evolving brain dead. Not Ready to do any testing as still has spontaneous Breathing
Status post VP shunt not working appropriately with concerning for persistent hydrocephalus. Family
is aware. Prognosis extremely poor
Blood Flow study shows no blood flow , But still has some brain stem activity, most likely will Proceed
to brain death or in vegetative status
Nephrology management of fluid status and sodium
Continue mechanical ventilation support
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140,
Family does not want One legacy , But patient was registered , Risk management to Follow
Neurosurgery F/U
SCDs for thromboprophylaxis
correct hypernatremia , Nephro Following , May need DDAVP
tube feeding
Per neurosurgery- - Likely has a partially functioning shunt which limits extent of elevated ICPs and
further brainstem herniation

Exam

Narrative: Exam Narrative:
Exam Narrative:
General: Intubated orally
ENT: Eyes are normal to inspection. Pupils dilated, and non reactive , Neg corneals
Neck: Normal inspection. Full range of motion.
Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present. Breathing over the set rate
Cardiovascular: Regular rate and rhythm. S1S2 present.
Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
Neuro: Bilateral pupil dilated fixed no gag does not withdraw to any painful noxious stimuli. Patient is off all sedation

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

61 y/o F w/ 3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

Hypernatremia 2/2 DI in setting of intraventricular hemorrhage
sodium goal still remains 150-155
restart DDAVP 2q12 for now, watch urine output
not tolerating free water flushes
patient is exhibiting clinical signs of brain death

Brain flow and function scan is confirmatory for brain death
will start D5W at 50 cc /hour and monitor BMP

d/w Dr Lau today

ITS Impressions

Renal Ultrasound 11/06/22 10:38

Impression:

1. Echogenic kidneys which can be seen in the setting of medical renal disease. No hydronephrosis.
2. There is a 8 mm cortical echogenicity in the left kidney which could represent a nonspecific cortical calcification versus a nonobstructing calculus.

If you are a provider and would like to contact the interpreting physician or one of the staff members, please call (626) 244-8200. For patients who have questions in regard to this examination, please contact your referring doctor directly.

Abdomen Ultrasound 11/21/22 08:47

Impression:

Unremarkable abdominal ultrasound.

If you are a provider and would like to contact the interpreting physician or one of the staff members, please call (626) 244-8200. For patients who have questions in regard to this examination, please contact your referring doctor directly.

KUB X-Ray 11/23/22 09:26

Impression:

Nonobstructive bowel gas pattern.

VP shunt in place as above.

If you are a provider and would like to contact the interpreting physician or one of the staff members, please call (626) 244-8200. For patients who have questions in regard to this examination, please contact your referring doctor directly.

Head CT 11/23/22 23:01

Impression:

Grossly stable hydrocephalus with layering blood product in the posterior horns of bilateral lateral ventricles are seen. There seems to be increased subarachnoid hyperdensity in both hemispheres and basal cistern, compatible with new subarachnoid hemorrhage.

A right frontal encephalomalacia with stable positioning of the ventricular peritoneal shunt catheter is seen. Status of gray-white differentiation is grossly stable compared to the most recent study.

Findings were discussed with the patient's nurse at 11:33 PM

If you are a provider and would like to contact the interpreting physician or one of the staff members, please call (626) 244-8200. For patients who have

3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, s/p VPS insertion

cont. ICU

cont. IV keppra for seizure ppx

pupils fixed, no gag reflex -> neurologically poor prognosis d/w family

breathing over the vent => not brain dead

NM brain blood flow consistent with brain dead

appreciate neurology input, no higher cortical function seen

Hypernatremia

central DI

- goal sodium 150-155

- start DDAVP and D5

- renal following

Leukocytosis due to possible aspiration vs VAP

follow blood/sputum cultures

on empiric zosyn per ID

levophed for shock

anasarca

GI ppx: pepcid

DVT ppx: SCD given ICH

Poor prognosis

Dispo:

11/28 I spoke with patient sister and brother over the phone. Dr. Sandhu has contacted them that patient is not declared brain death that yet due to still have some brainstem function (over breathing vent). We will involve Neurology to help us to make a more clear diagnosis. I introduce myself to the sister again as she remember me from our prior conversation at the beginning of the month regarding her disability form. She and her brother are very upset with 1 Legacy and would not want her organs to be harvest whether she is brain dead or not. I found her advanced directive in the chart and noted that sister is the decision maker including organ donation decision. I spoke with Dr. Sanchez from Neurology to evaluate the patient. I also spoke with the representative from 1 Legacy and asked them to not contact the patient's family for now and I informed them about patient's family's decision about not donating organ.

11/30

I have a long face to face conversation with patient's brother and sister Mary Ellen. They are very frustrated about patient's situation. They shared with me she was a lively person who was a 3rd grade teacher and also involved in community work to help others. They have guilt because they are the one who convince patient to get the surgery at the end. They are also very confused about her diagnosis. We discussed death, brain dead and her picture. She is not demonstrating any higher level cortical function but still have residual brain stem function so she is not brain dead yet. However we

Emanate Health Queen of the Valley Hospital
Patient: Lyons, Kathleen A Date of Birth: 07/13/1961

Med/Rec Number: MR01483046 Account Number: QH0054940416 Internal Med Progress Note

are not expecting her to recover and likely she will get worse and become brain dead. They are catholic and they explained they are not comfortable with withdrawing care, which is against their religion. However they also do not want to lengthen her suffering. They have decided to continue but cap current treatment. **Will not add new medication, will not increase pressor dose, no dialysis, no pacemaker. Discussed with ICU RN and Dr Sandhu.**

Internal Medicine - PN: Subj

Subjective

Interval history:

Patient remain on Levophed for blood pressure support. Is having high residual with feeding. Also oligouric.

Assessment and Plan

Assessment and plan

- (1) Leukocytosis:
Status: Acute
Category: Medical
- (2) HAP (hospital-acquired bacterial pneumonia):
Status: Acute
Category: Medical
- (3) Enterobacter sepsis:
Status: Acute
Category: Medical
- (4) Complicated UTI (urinary tract infection):
Status: Acute
Category: Medical
- (5) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical
- (6) Ventilator dependent:
Status: Acute
Category: Medical
- (7) Colloid cyst of brain:
Status: Acute
Category: Medical
- (8) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (9) Hypothyroid:
Status: Acute
Category: Medical

Plan

Leukocytosis resolved. Brain flow nuclear study compatible with brain death.
Septic shock. Remains hypotensive on Levophed.
Wean off Levophed with MAP goal 65.
Pupils fixed and dilated. Likely due to brain death. Neuro to confirm.
Status post VP shunt with possible persistent hydrocephalus

Remain on mechanical ventilator, comatose unresponsive pupils dilated and nonreactive

The patient is on empirically IV Zosyn for 10 days status post 1 dose of vancomycin noted leukocytosis worsening

Urine culture Enterobacter and Staph

Overall grave prognosis

Consider supportive care

Family aware of current clinical condition and overall outcome

Subjective

Subjective

Interval history:

Seen in ICU.

Remains comatose on vent.

WBC down to 10. Brain flow study c/w brain death.

Exam

Narrative

Exam Narrative:

People 6 millimeters and nonreactive bilaterally

Left eye open spontaneously

Flexes bilateral lower extremities to pain

No movement of upper extremities to pain

Med/Rec Number: MR01483046 Account Number: QH0054940416 Infect Disease - Progress Note

No commands
Does not regard examined
Shunt valve no longer primes.

Const

General: no acute distress and well developed

Other:

Female patient, lying in bed, intubated and not sedated, however patient is unresponsive

HENMT

Head: normocephalic and atraumatic

Mouth: moist mucous membranes

Other:

People 6 millimeters and nonreactive bilaterally

Left eye open spontaneously

Eyes

Pupils: PERRL

EOM: EOM intact bilaterally

Neck

Neck: no lymphadenopathy, no meningeal signs and no JVD

Resp

Effort & Inspection: normal respiratory effort

Auscultation: clear to auscultation bilaterally

Other:

Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Rate: regular rate

Rhythm: regular rhythm

Heart Sounds: S1 normal and S2 normal

Other:

Regular rate and rhythm, S1/S2 present

GI

Palpation: soft (Nontender, nondistended)

Skin

General skin exam: no rashes or lesions noted

Neuro

Cranial Nerves: CN's II-XII intact bilaterally

Motor: muscle tone normal throughout and strength 5/5 throughout

Other:

Trached, eyes open to light stimulation R>L, right pupil reactive, left pupil non-reactive, positive right corneal, no left corneal, +cough, trace withdrawal to stimulation RUE/RLE, no movements LUE

Extrem

General: full ROM and no clubbing, cyanosis or edema

Other:

Flexes bilateral lower extremities to pain

No movement of upper extremities to pain

Psych

Other:

Mood and affect normal

Assessment and Plan

Assessment and plan

- (1) Enterobacter sepsis:
Status: Acute
Category: Medical
- (2) Colloid cyst of brain:
Status: Acute
Category: Medical
- (3) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (4) Ventilator dependent:
Status: Acute
Category: Medical

Plan

All imaging reviewed. Brain stem reflexes absent. Only motor response is 1) LUE extensor which is consistent with midbrain lesion 2) triple flexion which is a spinal response. Bouts of clonus witnessed not consistent with volitional movement. No cortical function is appreciated. Patient's RR was 24, which is above the vent setting (18). Indicative of midbrain lesion causing central hyperventilation.

Overall, the patient's exam is consistent with brain death, except for the presence of rapid RR. This finding will likely resolve in the coming days as her intracranial injury evolves. The patient exhibits no cortical function and is not expected to make any recovery. She had family desired to continue with full care then patient will have to go to an LTAC once she is able to come off pressors.

Recommend compassionate extubation.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
No acute events.

Exam

Narrative

Exam Narrative:

LIMITED DUE TO PATIENT'S MENTAL STATUS

Patient is lying in bed, intubated, on vent.

Eyes closed. Not responsive to voice or noxious stimulus. Does not follow commands.

Forward gaze. Pupils irregular shape, 6 mm, non-reactive.

Oculocephalic reflex absent.

Corneal reflexes absent.

No facial asymmetry.

Gag reflex absent

Motor response to peripheral noxious stimuli:

LUE extensor

RUE none

BLE triple flexion

Patient noted to have short episodes of clonus , stimulus-induced.

Heart regular.

Lungs vent sounds.

Abdomen soft.

Peripheral pulses present and equal.

Skin of lower extremities dry.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of brain:

Status: Acute

Assessment and Plan:

61F w/ colloid cyst s/p endoscopic resection c/b IVH, brainstem hemorrhage, s/p VP shunt with persistent ventriculomegaly.

- Continue to monitor for brainstem activity, defer to Neurology re: further management and recommendations
- Likely has a partially functioning shunt which limits extent of elevated ICPs and further brainstem herniation, no further intervention requested by family
- Will sign off and defer supportive management to Dr. Lau and Dr. Sandhu
- Please call with any questions or concerns

Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

Continues to overbreathe ventilator. No significant changes.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

Concerning for evolving brain dead. Not Ready to do any testing as still has spontaneous Breathing
Status post VP shunt not working appropriately with concerning for persistent hydrocephalus. Family
is aware. Prognosis extremely poor
Blood Flow study shows no blood flow , But still has some brain stem activity, most likely will Proceed
to brain death or in vegetative status
Nephrology management of fluid status and sodium
Continue mechanical ventilation support
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140,
Family does not want One legacy , But patient was registered , Risk management to D/w One legacy
Neurosurgery F/U
SCDs for thromboprophylaxis
correct hypernatremia
tube feeding
Per neurosurgery- - Likely has a partially functioning shunt which limits extent of elevated ICPs and
further brainstem herniation

Subjective

Subjective

Progress Note Date: 11/29/22

Interval history:

Doing poorly

Lethargic

Still Pupils No reaction

Breathing still over the set rate

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. Pupils dilated, and non reactive , Neg corneals
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present. Breathing over the set rate
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Bilateral pupil dilated fixed no gag does not withdraw to any painful noxious stimuli. Patient is off all sedation

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical
- (9) Ventilator dependent:
Status: Acute
Category: Medical
- (10) Respiratory failure:
Status: Acute
Category: Medical

Plan

61 y/o F w/ 3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, s/p VPS insertion

cont. ICU

cont. IV keppra for seizure ppx

pupils fixed, no gag reflex -> neurologically poor prognosis d/w family

breathing over the vent => not brain dead

NM brain blood flow consistent with brain dead

appreciate neurology input, no higher cortical function seen

Hypernatremia

central DI

- goal sodium 150-155

- start DDAVP and D5

- renal following

Leukocytosis due to possible aspiration vs VAP

follow blood/sputum cultures

on empiric zosyn per ID

levophed for shock

GI ppx: pepcid

DVT ppx: SCD given ICH

Poor prognosis

Dispo:

11/28 I spoke with patient sister and brother over the phone. Dr. Sandhu has contacted them that patient is not declared brain death that yet due to still have some brainstem function (over breathing vent). We will involve Neurology to help us to make a more clear diagnosis. I introduce myself to the sister again as she remember me from our prior conversation at the beginning of the month regarding her disability form. She and her brother are very upset with 1 Legacy and would not want her organs to be harvest whether she is brain dead or not. I found her advanced directive in the chart and noted that sister is the decision maker including organ donation decision. I spoke with Dr. Sanchez from Neurology to evaluate the patient. I also spoke with the representative from 1 Legacy and asked them to not contact the patient's family for now and I informed them about patient's family's decision about not donating organ.

Internal Medicine - PN: Subj

Subjective

Interval history:

Still on levophed for blood pressure support. Hypernatremia worsen.

Assessment and Plan

Assessment and plan

- (1) Leukocytosis:
Status: Acute
Category: Medical
- (2) HAP (hospital-acquired bacterial pneumonia):
Status: Acute
Category: Medical
- (3) Enterobacter sepsis:
Status: Acute
Category: Medical
- (4) Complicated UTI (urinary tract infection):
Status: Acute
Category: Medical
- (5) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical
- (6) Ventilator dependent:
Status: Acute
Category: Medical
- (7) Colloid cyst of brain:
Status: Acute
Category: Medical
- (8) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (9) Hypothyroid:
Status: Acute
Category: Medical

Plan

Septic shock. Remains hypotensive on Levophed.
Wean off Levophed with MAP goal 65.
Pupils fixed and dialed. Likely due to brain death. Neuro to confirm.
Status post VP shunt with possible persistent hydrocephalus
Remain on mechanical ventilator, comatose unresponsive pupils dilated and nonreactive

Postop leukocytosis, noted worsening WBC
possible aspiration pneumonitis also UTI
patient on empirically IV Zosyn for 10 days status post 1 dose of vancomycin noted leukocytosis
worsening
Urine culture Enterobacter and Staph
Overall grave prognosis
Consider supportive care
Family aware of current clinical condition and overall outcome

Subjective

Subjective

Interval history:

Seen in ICU.

Remains comatose on vent. On vasopressors.

WBC down to 13. Cultures reviewed.

Exam

Narrative

Exam Narrative:

People 6 millimeters and nonreactive bilaterally

Left eye open spontaneously

Flexes bilateral lower extremities to pain

No movement of upper extremities to pain

Med/Rec Number: MR01483046 Account Number: QH0054940416 Infect Disease - Progress Note

No commands
Does not regard examined
Shunt valve no longer primes.

Const

General: no acute distress and well developed

Other:

Female patient, lying in bed, intubated and not sedated, however patient is unresponsive

HENMT

Head: normocephalic and atraumatic

Mouth: moist mucous membranes

Other:

People 6 millimeters and nonreactive bilaterally

Left eye open spontaneously

Eyes

Pupils: PERRL

EOM: EOM intact bilaterally

Neck

Neck: no lymphadenopathy, no meningeal signs and no JVD

Resp

Effort & Inspection: normal respiratory effort

Auscultation: clear to auscultation bilaterally

Other:

Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Rate: regular rate

Rhythm: regular rhythm

Heart Sounds: S1 normal and S2 normal

Other:

Regular rate and rhythm, S1/S2 present

GI

Palpation: soft (Nontender, nondistended)

Skin

General skin exam: no rashes or lesions noted

Neuro

Cranial Nerves: CN's II-XII intact bilaterally

Motor: muscle tone normal throughout and strength 5/5 throughout

Other:

Trached, eyes open to light stimulation R>L, right pupil reactive, left pupil non-reactive, positive right corneal, no left corneal, +cough, trace withdrawal to stimulation RUE/RLE, no movements LUE

Extrem

General: full ROM and no clubbing, cyanosis or edema

Other:

Flexes bilateral lower extremities to pain

No movement of upper extremities to pain

Psych

Other:

Mood and affect normal

Assessment and Plan

Assessment and plan

- (1) Leukocytosis:
Status: Acute
Category: Medical
- (2) HAP (hospital-acquired bacterial pneumonia):
Status: Acute
Category: Medical
- (3) Enterobacter sepsis:
Status: Acute
Category: Medical
- (4) Complicated UTI (urinary tract infection):
Status: Acute
Category: Medical
- (5) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical
- (6) Ventilator dependent:
Status: Acute
Category: Medical
- (7) Colloid cyst of brain:
Status: Acute
Category: Medical
- (8) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (9) Hypothyroid:
Status: Acute
Category: Medical

Plan

Remains hypotensive. Wean off Levophed with MAP goal 65.
Pupils fixed and dialed. Likely due to brain death. Neuro to confirm.
Status post VP shunt with possible persistent hydrocephalus
Remain on mechanical ventilator, comatose unresponsive pupils dilated and nonreactive

Postop leukocytosis, noted worsening WBC
possible aspiration pneumonitis also UTI
patient on empirically IV Zosyn status post 1 dose of vancomycin noted leukocytosis worsening
Urine culture Enterobacter and Staph
Overall grave prognosis
Consider supportive care
Family aware of current clinical condition and overall outcome

Subjective

Subjective

Interval history:

Seen in ICU.

Remains comatose on vent.

Still on Levophed.

Low gr fevers 99.2 WBC 16.

Exam

Narrative

Exam Narrative:

People 6 millimeters and nonreactive bilaterally

Left eye open spontaneously

Flexes bilateral lower extremities to pain

No movement of upper extremities to pain

No commands

Does not regard examined
Shunt valve no longer primes.

Const

General: no acute distress and well developed

Other:

Female patient, lying in bed, intubated and not sedated, however patient is unresponsive

HENMT

Head: normocephalic and atraumatic

Mouth: moist mucous membranes

Other:

People 6 millimeters and nonreactive bilaterally

Left eye open spontaneously

Eyes

Pupils: PERRL

EOM: EOM intact bilaterally

Neck

Neck: no lymphadenopathy, no meningeal signs and no JVD

Resp

Effort & Inspection: normal respiratory effort

Auscultation: clear to auscultation bilaterally

Other:

Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Rate: regular rate

Rhythm: regular rhythm

Heart Sounds: S1 normal and S2 normal

Other:

Regular rate and rhythm, S1/S2 present

GI

Palpation: soft (Nontender, nondistended)

Skin

General skin exam: no rashes or lesions noted

Neuro

Cranial Nerves: CN's II-XII intact bilaterally

Motor: muscle tone normal throughout and strength 5/5 throughout

Other:

Trached, eyes open to light stimulation R>L, right pupil reactive, left pupil non-reactive, positive right corneal, no left corneal, +cough, trace withdrawal to stimulation RUE/RLE, no movements LUE

Extrem

General: full ROM and no clubbing, cyanosis or edema

Other:

Flexes bilateral lower extremities to pain

No movement of upper extremities to pain

Psych

Other:

Mood and affect normal

Assessment and Plan

Assessment and plan

(1) Colloid cyst of brain:

Status: Acute

Assessment and Plan:

61F w/ colloid cyst s/p endoscopic resection c/b IVH, brainstem hemorrhage, s/p VP shunt with persistent ventriculomegaly.

- Continues to demonstrate significant bilateral cranial neuropathies consistent with elevated ICP and brainstem herniation syndrome. Adjunctive ancillary testing consistent with absent intracranial blood flow. However, continues to trigger breathes above the set respiratory rate suggestive of limited brainstem function. Remains poor prognostically. Discussed condition with her brother and sister. They do not wish to proceed with any comfort measures despite her poor neurological function and I do not believe that at this point there is any benefit to further aggressive surgical interventions (of which they declined last week).
- Continue supportive care, monitor for changes in respiratory pattern or hemodynamic instability that may reflect progression of brainstem injury/herniation syndrome.

Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

Nuclear brain flow study without evidence of intracranial blood flow. Continues to overbreath ventilator despite otherwise limited brainstem function.

Assessment and Plan

Assessment and plan

- (1) Enterobacter sepsis:
Status: Acute
Category: Medical
- (2) Colloid cyst of brain:
Status: Acute
Category: Medical
- (3) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (4) Ventilator dependent:
Status: Acute
Category: Medical

Plan

All imaging reviewed. Brain stem reflexes absent. Only motor response is 1) LUE extensor which is consistent with midbrain lesion 2) triple flexion which is a spinal response. Bouts of clonus witnessed not consistent with volitional movement. No cortical function is appreciated. Patient's RR was 24, which is above the vent setting (18). Indicative of midbrain lesion causing central hyperventilation.

Overall, the patient's exam is consistent with brain death, except for the presence of rapid RR. This finding will likely resolve in the coming days as her intracranial injury evolves. The patient exhibits no cortical function and is not expected to make any recovery.

Recommend compassionate extubation.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
Patient on levophed. No sedation.

Exam

Narrative

Exam Narrative:

LIMITED DUE TO PATIENT'S MENTAL STATUS

Patient is lying in bed, intubated, on vent.

Eyes closed. Not responsive to voice or noxious stimulus. Does not follow commands.

Forward gaze. Pupils irregular shape, 6 mm, non-reactive.

Oculocephalic reflex absent.

Corneal reflexes absent.

No facial asymmetry.

Gag reflex absent

Motor response to peripheral noxious stimuli:

LUE extensor

RUE none

BLE triple flexion

Patient noted to have short episodes of clonus , stimulus-induced.

Heart regular.

Lungs vent sounds.

Abdomen soft.

Peripheral pulses present and equal.

Skin of lower extremities dry.

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical

Plan

ASSESSMENT:

DMT2 ID.
Hypothyroidism.
Colloid cyst of third ventricle.
Acute hypoxic respiratory failure
Obstructive hydrocephalus.
Intraventricular hemorrhage.
Hyponatremia
Status post VP shunt.
Status post trach and PEG.

PLANS:

Continue with present Tube feeding.
Sliding scale.
Increase NPH 34 U Q8h.
Synthroid 112 mcg QD.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
No hypoglycemia. On Vent. On Tube feeding.

Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

61 y/o F w/ 3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

Hypernatremia 2/2 DI in setting of intraventricular hemorrhage
sodium goal still remains 150-155
restart DDAVP 2q12 for now, watch urine output
start Free water Flushes at 100cc q4hrs
patient is exhibiting clinical signs of brain death

family is requesting confirmatory testing with an EEG

prognosis is extremely poor. discussed with patient's sister by bedside 11/26. She is not yet ready to withdraw care, and is requesting brain death confirmatory studies

d/w ICU RN staff

d/w hospitalist

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

urine output rising again. sodium up to 159mmol/L

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

Concerning for evolving brain dead. Not Ready to do any testing as still has spontaneous Breathing
Status post VP shunt not working appropriately with concerning for persistent hydrocephalus. Family
is aware. Prognosis extremely poor
Blood Flow study shows no blood flow , But still has some brain stem activity
Nephrology management of fluid status and sodium
Continue mechanical ventilation support
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140,
Family does not want One legacy , But patient was registered , Risk management to D/w One legacy
Neurosurgery F/U
SCDs for thromboprophylaxis
Total Critical Care Time: 31

Subjective

Subjective

Progress Note Date: 11/28/22

Interval history:

Looks Poor , Patient still breathing over the vent set rate , the patient's exam is consistent with brain death, except for the presence of rapid RR. This finding will likely resolve in the coming days as her intracranial injury evolves. The patient exhibits no cortical function and is not expected to make any recovery

Exam

Narrative: Exam Narrative:
Exam Narrative:
General: Intubated orally
ENT: Eyes are normal to inspection. Pupils dilated, and non reactive , Neg corneals
Neck: Normal inspection. Full range of motion.
Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present. Breathing over the set rate
Cardiovascular: Regular rate and rhythm. S1S2 present.
Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
Neuro: Bilateral pupil dilated fixed no gag does not withdraw to any painful noxious stimuli. Patient is off all sedation

Critical Care Time

Critical Care Time

Critical Care Time: Yes

Total Critical Care Minutes: 35

Attestation:

CCT Spent more than 35 min rev chart, Attestation: The patient's condition required urgent complex decision-making to assess and prevent vital organ system failure. In order to prevent imminent or life threatening deterioration in the patient's condition, management required frequent reassessment of the clinical status at bedside, of vital signs, and response to interventions. The time involved in the

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical
- (9) Ventilator dependent:
Status: Acute
Category: Medical
- (10) Respiratory failure:
Status: Acute
Category: Medical

Plan

61 y/o F w/ 3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, s/p VPS insertion

cont. ICU

cont. IV keppra for seizure ppx

pupils fixed, no gag reflex -> neurologically poor prognosis d/w family

breathing over the vent => not brain dead

NM brain blood flow consistent with brain dead

will consult neurology for assistance

Hypernatremia

central DI

- goal sodium 150-155

- start DDAVP and D5

- renal following

Leukocytosis due to possible aspiration vs VAP

follow blood/sputum cultures

on empiric zosyn + vanc per ID

GI ppx: pepcid

DVT ppx: SCD given ICH

Poor prognosis

Dispo: I spoke with patient sister and brother over the phone. Dr. Sandhu has contacted them that patient is not declared brain death that yet due to still have some brainstem function (over breathing vent). We will involve Neurology to help us to make a more clear diagnosis. I introduce myself to the sister again as she remember me from our prior conversation at the beginning of the month regarding her disability form. She and her brother are very upset with 1 Legacy and would not want her organs to be harvest whether she is brain dead or not. I found her advanced directive in the chart and noted that sister is the decision maker including organ donation decision. I spoke with Dr. Sanchez from Neurology to evaluate the patient. I also spoke with the representative from 1 Legacy and asked them to not contact the patient's family for now and I informed them about patient's family's decision about not donating organ.

Internal Medicine - PN: Subj

Subjective

Interval history:

Patient seen and examined. patient now has dilated pupils in both eyes. She is noted to have some intermittent tremor. She still withdrawing from pain.

Plan

61 y/o F w/ 3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

Hypernatremia 2/2 DI in setting of intraventricular hemorrhage
sodium goal still remains 150-155
urine output has slowed down, no longer requires DDAVP. Will monitor UOP and restart if needed possibly by tomorrow
continue 1/2NS at 50cc/hr, will attempt to bring sodium levels down

patient is exhibiting clinical signs of brain death
family is requesting confirmatory testing with an EEG

prognosis is extremely poor. discussed with patient's sister by bedside 11/26. She is not yet ready to withdraw care, and is requesting brain death confirmatory studies

d/w ICU RN staff

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

Concerning for evolving brain dead. Unable to performed apnea testing due to her shock and electrolyte disturbance. Appreciate Neuro recs for further imaging if warranted. Patient's registered donor.
Status post VP shunt not working appropriately with concerning for persistent hydrocephalus. Family is aware. Prognosis extremely poor
Nephrology management of fluid status and sodium
Continue mechanical ventilation support
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Total Critical Care Time: 31
Attestation: The patient's condition required urgent complex decision-making to assess and prevent vital organ system failure. In order to prevent imminent or life threatening deterioration in the patient's condition, management required frequent reassessment of the clinical status at bedside, of vital signs, and response to interventions. The time involved in the performance of separately reportable procedures was not counted toward critical care time. Systems at risk: respiratory

Subjective

Subjective

Interval history:

Remains on mechanical ventilation. No change in neuro status.

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Bilateral pupil dilated fixed no gag does not withdraw to any painful noxious stimuli. Patient is off all sedation

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical

Plan

ASSESSMENT:

DMT2 ID.
Hypothyroidism.
Colloid cyst of third ventricle.
Acute hypoxic respiratory failure
Obstructive hydrocephalus.
Intraventricular hemorrhage.
Hyponatremia
Status post VP shunt.
Status post trach and PEG.

PLANS:

Continue with present Tube feeding.
Sliding scale.
NPH 30 U Q8h.
Synthroid 112 mcg QD.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
No hypoglycemia. On Vent. On tube feeding.

Plan

61 y/o F w/ 3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

11/26/22:

3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, s/p VPS insertion
cont. ICU
cont. IV keppra for seizure ppx

pupils fixed, no gag reflex -> neurologically poor prognosis d/w family
family decided for DNR and deciding whether to pursue terminal extubation
Followup with family decision and further planning.

Hypernatremia

steroids and salt tabs via NGT d/ced
s/p hypertonic saline, resume if Na < 150 per nephro
on desmopressin and gentle 1/2 NS

Leukocytosis due to possible aspiration vs VAP

follow blood/sputum cultures
on empiric zosyn + vanc per ID

GI ppx: pepcid

DVT ppx: SCD given ICH

Poor prognosis

Dispo: Pending family's decision re: terminal extubation given poor prognosis.

Subjective

Subjective

Interval history:

Patient is not responding to any commands and pupils are fixed. On vent with trach. Tube feeding is tolerated well.

Exam

Narrative

Exam Narrative:

General: Intubated with trach and non responsive.

HEENT: No scleral icterus. Moist mucous membranes.

Neck: No JVD. No lymphadenopathy.

CV: Regular rate and rhythm. No audible murmurs, rubs, or gallops. No S3 or S4.

Pulm: Clear to auscultation bilaterally with good air exchange throughout. No wheezing or rales.

Abdomen: Soft-nondistended. Bowel sounds audible.

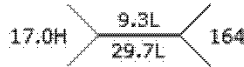

Extremities: No LE edema bilaterally. 2+ DP pulse bilaterally.

Neuro: Not following commands. Pupils fixed.

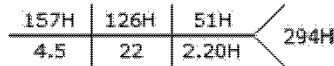

Skin: No significant rashes or skin breakdown.

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical

Plan

ASSESSMENT:

DMT2 ID.
Hypothyroidism.
Colloid cyst of third ventricle.
Acute hypoxic respiratory failure
Obstructive hydrocephalus.
Intraventricular hemorrhage.
Hyponatremia
Status post VP shunt.
Status post trach and PEG.

PLANS:

Continue with present Tube feeding.
Sliding scale.
NPH 24 U Q8h.
Synthroid 112 mcg QD.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
No hypoglycemia. On Vent. On feeding.

Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

61 y/o F w/ 3rd ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

Hypernatremia 2/2 DI in setting of intraventricular hemorrhage sodium goal still remains 150-155 urine output has slowed down, no longer requires DDAVP. Will monitor UOP and restart if needed continue 1/2NS at 50cc/hr, will attempt to bring sodium levels down patient is exhibiting clinical signs of brain death

family is requesting confirmatory testing with an EEG

prognosis is extremely poor. discussed with patient's sister by bedside 11/26. She is not yet ready to withdraw care, and is requesting brain death confirmatory studies

d/w ICU RN staff

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

patient still has absent corneal reflexes, gag reflexes, and now goes apneic when ventilator is paused, per RN staff. Patient's sister is requesting an EEG and confirmatory tests for brain death before she makes any further decisions.

Assessment and Plan

Assessment and plan

- (1) Leukocytosis:
Status: Acute
Category: Medical
- (2) HAP (hospital-acquired bacterial pneumonia):
Status: Acute
Category: Medical
- (3) Enterobacter sepsis:
Status: Acute
Category: Medical
- (4) Complicated UTI (urinary tract infection):
Status: Acute
Category: Medical
- (5) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical
- (6) Ventilator dependent:
Status: Acute
Category: Medical
- (7) Colloid cyst of brain:
Status: Acute
Category: Medical
- (8) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (9) Hypothyroid:
Status: Acute
Category: Medical

Plan

61-year-old female with intraventricular hemorrhage ,history of colloid cyst of brain status post VP shunt with possible persistent hydrocephalus
Remain on mechanical ventilator, comatose unresponsive pupils dilated and nonreactive

Postop leukocytosis, noted worsening WBC

Med/Rec Number: MR01483046 Account Number: QH0054940416 Infect Disease - Progress Note

possible aspiration pneumonitis also UTI
patient on empirically IV Zosyn status post 1 dose of vancomycin noted leukocytosis worsening
Urine culture Enterobacter and Staph
Overall grave prognosis
Consider supportive care
Family aware of current clinical condition and overall outcome

Subjective

Subjective

Interval history:

Patient remain unresponsive pupils dilated on mechanical ventilator, patient DNR

Exam

Narrative

Exam Narrative:

Average built female remain on mechanical ventilator

Right-sided scalp surgical site no drainage

HEENT pallor dilated pupil nonreactive

Neck no lymphadenopathy

Chest bilateral air entry

Heart S1-S2

Abdomen soft bowel sounds present

Extremities trace edema

Neurology unresponsive comatose

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

Concerning for evolving brain dead. Unable to performed apnea testing due to her shock and electrolyte disturbance. Patient's registered owner Status post VP shunt not working appropriately with concerning for persistent hydrocephalus. Family is aware. Prognosis extremely poor
Nephrology management of fluid status and sodium
Continue mechanical ventilation support
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Total Critical Care Time: 33
Attestation: The patient's condition required urgent complex decision-making to assess and prevent vital organ system failure. In order to prevent imminent or life threatening deterioration in the patient's condition, management required frequent reassessment of the clinical status at bedside, of vital signs, and response to interventions. The time involved in the performance of separately reportable procedures was not counted toward critical care time. Systems at risk: respiratory

Subjective

Subjective

Exam

Narrative: Exam Narrative:
Exam Narrative:
General: Intubated orally
ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
Neck: Normal inspection. Full range of motion.
Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
Cardiovascular: Regular rate and rhythm. S1S2 present.
Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
Neuro: Bilateral pupil dilated fixed no gag does not withdraw to any painful noxious stimuli. Patient is off all sedation

Patient: Lyons, Kathleen A **Date of Birth:** 07/13/1961

Med/Rec Number: MR01483046 **Account Number:** QH0054940416 **Hospitalist - Progress Note**

pupils fixed, no gag reflex -> neurologically poor prognosis d/w family
family decided for DNR and deciding whether to pursue terminal extubation

Hypernatremia
steroids and salt tabs via NGT d/ced
s/p hypertonic saline, resume if Na < 150 per nephro
on desmopressin and gentle 1/2 NS

Leukocytosis due to possible aspiration vs VAP
follow blood/sputum cultures
on empiric zosyn + vanc per ID

GI ppx: pepcid
DVT ppx: SCD given ICH

Poor prognosis

Dispo: Pending family's decision re: terminal extubation given poor prognosis.

Subjective

Subjective

Interval history:
11/26 - no focal neurological changes. Remains obtunded.

Exam

Narrative

Exam Narrative:
General: NAD

Const

General: no acute distress and well developed

HENMT

Head: normocephalic and atraumatic

Mouth: moist mucous membranes

Other:

People 6 millimeters and nonreactive bilaterally (11/26)

Eyes

Pupils: PERRL

EOM: EOM intact bilaterally

Neck

Neck: no lymphadenopathy, no meningeal signs and no JVD

Resp

Effort & Inspection: normal respiratory effort

Auscultation: clear to auscultation bilaterally

Other:

Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Rate: regular rate

Rhythm: regular rhythm

Heart Sounds: S1 normal and S2 normal

Other:

Regular rate and rhythm, S1/S2 present

GI

Palpation: soft (Nontender, nondistended)

Skin

General skin exam: no rashes or lesions noted

Neuro

Cranial Nerves: CN's II-XII intact bilaterally

Motor: muscle tone normal throughout and strength 5/5 throughout

Other:

Intubated and not sedated, not responsive to verbal or painful stimuli

Extrem

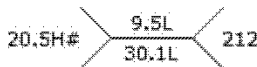

General: full ROM and no clubbing, cyanosis or edema

Other:

extremities not reacting to pain

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
s/p SAH and intraventricular hemorrhage, with clotted VP/ EVD resulting in acute herniation with loss of brainstem reflexes
Neurogenic shock
DI with UO of 225cc/ hour responding to DDAVP, will lower dose

Dm type 2 with hyperglycemia
- endocrine following f/u recs
on insulin drip as needed

Hypothyroidism
- on Synthroid

Renal function back to baseline
- Will continue to monitor

UTI continue antibiotic therapy

DVT prophylaxis stopped due to ICH

DC hydrocortisone as patient's cortisol level was in the 90 range.
Will DC hypertonic saline and switch to 1/2 NS. Stop NaCl via NGT due to serum sodium at 162

restart hypertonic saline when serum sodium drops below 150

Plan

11/23/2022:

- Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
 - keep SBP 100-140
 - NSx plan for VP shunt today
 - now with tracheostomy and G-tube
 - LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs
- increase NPH 30u q12h

Hypothyroidism

- on Synthroid 112 mcg po daily

HTN

- on amlodipine, hydralazine

mild elevation in LFT

- improved
- US abdomen unremarkable

DVT prophylaxis

GI ppx

Operative Report

Date of Operation: 11/23/22

Pre-op diagnosis: Hydrocephalus, colloid cyst

Post-op diagnosis: same

Operation Performed:

Right frontal ventriculoperitoneal shunt placement

Surgeon: Ye, Donald

1123-0200 CT/CT head/brain wo con

Impression:

Grossly stable hydrocephalus with layering blood product in the posterior horns of bilateral lateral ventricles are seen. There seems to be increased subarachnoid hyperdensity in both hemispheres and basal cistern, compatible with new subarachnoid hemorrhage.

A right frontal encephalomalacia with stable positioning of the ventricular peritoneal shunt catheter is seen. Status of gray-white differentiation is grossly stable compared to the most recent study.

Findings were discussed with the patient's nurse at 11:33 PM

11/24/2022:

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

Continue mechanical ventilation, FIO2 28%

Patient is status post right frontal ventriculoperitoneal shunt placement on 11/23

CT head without contrast results on 11/23 after surgery are above

Per Neurosurgery on 11/24:

"Plan

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion. I suspect the shunt is clogged or suboptimal drainage due to increased IVH. I discussed the situation at length with the patient's sister, brother, sister-in-law, niece, and nephew. I detailed the risks/benefits/alternatives (no surgery, CMO) of a left EVD insertion for them. They understand that her long-term prognosis remains very poor given brainstem hemorrhage and her GCS remaining stable and not progressing

Med/Rec Number: MR01483046 Account Number: QH0054940416 Hospitalist - Progress Note

over the last month. After answering all of their questions, there was obvious disagreement over the correct path to proceed between the brother and sister. I will give them slightly more time to decide and check in with them shortly."

Continue IV Keppra for seizure prophylaxis

Continue IV Cardene drip for BP support

WBC 20.2 (11.2 yesterday). Afebrile. This is possibly due to stress reaction; however, blood cultures x2 ordered, chest x-ray ordered, procalcitonin ordered, respiratory studies ordered, ID consulted Creatinine 1.30 (0.85 yesterday). Nephrology consulted

Blood sugars in the 400s. Insulin management per Endocrinology. Insulin drip started Supportive care

11/25/2022:

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

Continue mechanical ventilation, FiO2 35%

Patient is status post right frontal ventriculoperitoneal shunt placement on 11/23

CT head without contrast results on 11/23 after surgery are above

Per Neurosurgery on 11/24:

"Plan

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion. I suspect the shunt is clogged or suboptimal drainage due to increased IVH. I discussed the situation at length with the patient's sister, brother, sister-in-law, niece, and nephew. I detailed the risks/benefits/alternatives (no surgery, CMO) of a left EVD insertion for them. They understand that her long-term prognosis remains very poor given brainstem hemorrhage and her GCS remaining stable and not progressing over the last month. After answering all of their questions, there was obvious disagreement over the correct path to proceed between the brother and sister. I will give them slightly more time to decide and check in with them shortly."

Continue IV Keppra for seizure prophylaxis

WBC 14.9 (20.2 yesterday). Afebrile. This is possibly due to stress reaction; however, blood cultures x2 ordered, chest x-ray ordered, procalcitonin ordered, respiratory studies ordered, ID consulted Creatinine 1.30 (0.85 yesterday). Nephrology consulted

Blood sugars in the 100s (400s yesterday). Insulin management per Endocrinology. Insulin drip started yesterday

Na 162. Follow up Nephrology

Supportive care

Patient's family does not want patient to have any vasopressor support. They will decide today on whether to pursue terminal extubation

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical

Plan

ASSESSMENT:

DMT2 ID.
Hypothyroidism.
Colloid cyst of third ventricle.
Acute hypoxic respiratory failure
Obstructive hydrocephalus.
Intraventricular hemorrhage.
Hyponatremia
Status post VP shunt.
Status post trach and PEG.

PLANS:

Continue with present Tube feeding.
DC Insulin drip.
Sliding scale.
NPH 24 U Q8h.
Synthroid 112 mcg QD.
Discussed with Dr. Gallegos.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
No hypoglycemia. On tube feeding. On Vent.

Assessment and Plan

Assessment and plan

- (1) Leukocytosis:
Status: Acute
Category: Medical
- (2) HAP (hospital-acquired bacterial pneumonia):
Status: Acute
Category: Medical
- (3) Enterobacter sepsis:
Status: Acute
Category: Medical
- (4) Complicated UTI (urinary tract infection):
Status: Acute
Category: Medical
- (5) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical
- (6) Ventilator dependent:
Status: Acute
Category: Medical
- (7) Colloid cyst of brain:
Status: Acute
Category: Medical
- (8) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (9) Hypothyroid:
Status: Acute
Category: Medical

Plan

Leukocytosis down to 14.9 Will continue to monitor with new cultures.
s/p VP shunt. Likely clotted. Clinically, neurologically doing poorly.
Post-op leukocytosis ?aspiration
Now on IV Zosyn empirically.
s/p 1 dose of IV Vancomycin as well.

Procalcitonin normal. Order lactic acid with fevers.
VAP bundle discussed with RN and ICU team.
Prog poor.

Subjective

Subjective

Interval history:
Seen in ICU.
Remains comatose on vent.
No fevers. WBC down to 14.
Repeat cultures pending.

Exam

Narrative

Exam Narrative:
People 6 millimeters and nonreactive bilaterally
Left eye open spontaneously
Flexes bilateral lower extremities to pain
No movement of upper extremities to pain
No commands
Does not regard examined
Shunt valve no longer primes.

Const

General: no acute distress and well developed
Other:

Emanate Health Queen of the Valley Hospital
Patient: Lyons, Kathleen A **Date of Birth:** 07/13/1961

Med/Rec Number: MR01483046 **Account Number:** QH0054940416 **Infect Disease - Progress Note**

Female patient, lying in bed, intubated and not sedated, however patient is unresponsive

HENMT

Head: normocephalic and atraumatic
Mouth: moist mucous membranes
Other:
People 6 millimeters and nonreactive bilaterally
Left eye open spontaneously

Eyes

Pupils: PERRL
EOM: EOM intact bilaterally

Neck

Neck: no lymphadenopathy, no meningeal signs and no JVD

Resp

Effort & Inspection: normal respiratory effort
Auscultation: clear to auscultation bilaterally
Other:
Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Rate: regular rate
Rhythm: regular rhythm
Heart Sounds: S1 normal and S2 normal
Other:
Regular rate and rhythm, S1/S2 present

GI

Palpation: soft (Nontender, nondistended)

Skin

General skin exam: no rashes or lesions noted

Neuro

Cranial Nerves: CN's II-XII intact bilaterally
Motor: muscle tone normal throughout and strength 5/5 throughout
Other:
Trached, eyes open to light stimulation R>L, right pupil reactive, left pupil non-reactive, positive right corneal, no left corneal, +cough, trace withdrawal to stimulation RUE/RLE, no movements LUE

Extrem

General: full ROM and no clubbing, cyanosis or edema
Other:
Flexes bilateral lower extremities to pain
No movement of upper extremities to pain

Psych

Other:
Mood and affect normal

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

Reviewed neurosurgery recommendation. VP shunt is not working. Patient will eventually decompensated to brain death. Discussed with family. Code status DNR. Family is not ready for compassion extubation

Status post VP shunt. Neurosurgery follow-up
Nephrology management of fluid status and sodium
Continue mechanical ventilation support
Weaning trials
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Total Critical Care Time: 33

Attestation: The patient's condition required urgent complex decision-making to assess and prevent vital organ system failure. In order to prevent imminent or life threatening deterioration in the patient's condition, management required frequent reassessment of the clinical status at bedside, of vital signs, and response to interventions. The time involved in the performance of separately reportable procedures was not counted toward critical care time. Systems at risk: respiratory

Subjective

Subjective

Interval history:

Doing poorly on mechanical ventilation

Exam

Narrative: Exam Narrative:
Exam Narrative:
General: Intubated orally
ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
Neck: Normal inspection. Full range of motion.
Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
Cardiovascular: Regular rate and rhythm. S1S2 present.
Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

11/23/2022:

- Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
 - keep SBP 100-140
 - NSx plan for VP shunt today
 - now with tracheostomy and G-tube
 - LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs
- increase NPH 30u q12h

Hypothyroidism

- on Synthroid 112 mcg po daily

HTN

- on amlodipine, hydralazine

mild elevation in LFT

- improved
- US abdomen unremarkable

DVT prophylaxis

GI ppx

Operative Report

Date of Operation: 11/23/22

Pre-op diagnosis: Hydrocephalus, colloid cyst

Post-op diagnosis: same

Operation Performed:

Right frontal ventriculoperitoneal shunt placement

Surgeon: Ye, Donald

1123-0200 CT/CT head/brain wo con

Impression:

Grossly stable hydrocephalus with layering blood product in the posterior horns of bilateral lateral ventricles are seen. There seems to be increased subarachnoid hyperdensity in both hemispheres and basal cistern, compatible with new subarachnoid hemorrhage.

A right frontal encephalomalacia with stable positioning of the ventricular peritoneal shunt catheter is seen. Status of gray-white differentiation is grossly stable compared to the most recent study.

Findings were discussed with the patient's nurse at 11:33 PM

11/24/2022:

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion

Continue mechanical ventilation, FIO2 28%

Patient is status post right frontal ventriculoperitoneal shunt placement on 11/23

CT head without contrast results on 11/23 after surgery are above

Per Neurosurgery on 11/24:

"Plan

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage, now s/p VPS insertion. I suspect the shunt is clogged or suboptimal drainage due to increased IVH. I discussed the situation at length with the patient's sister, brother, sister-in-law, niece, and nephew. I detailed the risks/benefits/alternatives (no surgery, CMO) of a left EVD insertion for them. They understand that her long-term prognosis remains very poor given brainstem hemorrhage and her GCS remaining stable and not progressing

Emanate Health Queen of the Valley Hospital
Patient: Lyons, Kathleen A **Date of Birth:** 07/13/1961

Med/Rec Number: MR01483046 **Account Number:** QH0054940416 **Hospitalist - Progress Note**

over the last month. After answering all of their questions, there was obvious disagreement over the correct path to proceed between the brother and sister. I will give them slightly more time to decide and check in with them shortly."

Continue IV Keppra for seizure prophylaxis

Continue IV Cardene drip for BP support

WBC 20.2 (11.2 yesterday). Afebrile. This is possibly due to stress reaction; however, blood cultures x2 ordered, chest x-ray ordered, procalcitonin ordered, respiratory studies ordered, ID consulted

Creatinine 1.30 (0.85 yesterday). Nephrology consulted

Blood sugars in the 400s. Insulin management per Endocrinology. Insulin drip started
Supportive care

Exam

Const

General: no acute distress and well developed

Other:

Female patient, lying in bed, intubated and not sedated, however patient is unresponsive

HENMT

Head: normocephalic and atraumatic

Mouth: moist mucous membranes

Other:

People 6 millimeters and nonreactive bilaterally
 Left eye open spontaneously

Eyes

Pupils: PERRL
 EOM: EOM intact bilaterally

Neck

Neck: no lymphadenopathy, no meningeal signs and no JVD

Resp

Effort & Inspection: normal respiratory effort
 Auscultation: clear to auscultation bilaterally
 Other:
 Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Rate: regular rate
 Rhythm: regular rhythm
 Heart Sounds: S1 normal and S2 normal
 Other:
 Regular rate and rhythm, S1/S2 present

GI

Palpation: soft (Nontender, nondistended)

Skin

General skin exam: no rashes or lesions noted

Neuro

Motor: muscle tone normal throughout and strength 5/5 throughout

Extrem

General: full ROM and no clubbing, cyanosis or edema
 Other:
 Flexes bilateral lower extremities to pain
 No movement of upper extremities to pain

****ADDENDUM****

The family has decided against any further surgical intervention. They have asked that the patient be made DNR. they clearly understand that she will likely progress to brain death over the next several days. They also understand that they have the option fo CMO but have chosen against that at this time. They want TF and Medical care but no more heroic surgical interventions.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

CT head reviewed. Appreciate neurosurgery recommendation. hold all anticoagulation and replace coag as needed
Recommend optimize hyperglycemia. Endocrine management
increase urine output likely from hyperglycemia. Evaluate for diabetes insipidus. Nephrology consult

Status post VP shunt. Neurosurgery follow-up
Continue mechanical ventilation support
Weaning trials
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
CCTime 32 mins pent

Subjective

Subjective

Interval history:

Repeat CT head concerning for new bleed pre patient have a having a lot of urine output.

Hyperglycemia noted.

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical

Plan

ASSESSMENT:

DMT2 ID.
Hypothyroidism.
Colloid cyst of third ventricle.
Acute hypoxic respiratory failure
Obstructive hydrocephalus.
Intraventricular hemorrhage.
Hyponatremia
Status post VP shunt.
Status post trach and PEG.

PLANS:

Continue with present Tube feeding.
Start Insulin drip.
Increase NPH 24 U Q8h.
Synthroid 112 mcg QD.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
No hypoglycemia. On Tube feeding. On Vent.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

Status post VP shunt. Neurosurgery follow-up
Continue mechanical ventilation support
Weaning trials
Continue neuro status no change remains comatose
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Pending LTAC placement

Subjective

Subjective

Interval history:
Status post VP shunt. Remains on the vent

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- NSx plan for VP shunt today
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs
- increase NPH 30u q12h

Hypothyroidism

- on Synthroid 112 mcg po daily

HTN

- on amlodipine, hydralazine

mild elevation in LFT

- improved
- US abdomen unremarkable

DVT prophylaxis

GI ppx

Internal Medicine - PN: Subj

Subjective

Interval history:

To get VP shunt today.

Assessment and Plan

Assessment and plan

- (1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/25/22 04:56
Hemoglobin A1c	7.9 H

IS ON TF OF GLUCERNA AT 55 ML/HR.
IS ON NPH INSULIN 22 U Q12HRS AND NOVOLOG Q6HRS SLIDING SCALE.
BLOOD SUGARS ARE HIGHER.
NO HYPOGLYCEMIA.
INCREASE THE NPH INSULIN TO 30 U Q12HRS FOR BETTER BLOOD SUGAR CONTROL.
CHANGE THE NOVOLOG SLIDING SCALE TO Q4HRS.

Category: Medical

- (2) Hypothyroid:
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/28/22 05:17
TSH	0.513 L

IS ON LT4 AT 0.112 MG DAILY.
Category: Medical

Subjective

Subjective: Progress Note Date: 11/22/22 Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
IS ON TF OF GLUCERNA AT 55 ML/HR.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of brain:

Status: Acute

Assessment and Plan:

slow progress s/p colloid cyst resection.

- NPO p MN
- DC lovenox
- clamp EVD at 5 am

Category: Medical

(2) Intraventricular hemorrhage:

Status: Acute

Category: Medical

Plan

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage

- supportive care in ICU
- EVD at 10 cm H20 and open to drain

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- EVD at 10, NSx plan for VP shunt
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs
- increase NPH 26u q12h

Hypothyroidism

- on Synthroid 112 mcg po daily

HTN

- on amlodipine, hydralazine

DVT prophylaxis

GI ppx

Internal Medicine - PN: Subj

Subjective

Interval history:

repeat CT showed ventricular dilatation and transependymal edema when EVD is clamped. Now EVD is set at 10.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

EVD clamped. Pending CT head.
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,
EVD management per Neurosurgery
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Palliative care follow-up

Subjective

Subjective

Interval history:
Remains mechanical ventilation EVD was clamped

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- per Neurosurgery, still need the EVD it's at 15 now, if she fails weaning, then she may need a VP

shunt

- vitals and labs are otherwise stable
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs

Hypothyroidism

- on Synthroid

Renal function back to baseline

- Will continue to monitor

UTI

- s/p IV abx

hyponA

- resolved

DVT prophylaxis

more than 35 min time spent on this pt

Internal Medicine - PN: Subj

Assessment and Plan

Assessment and plan

- (1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/25/22 04:56
Hemoglobin A1c	7.9 H

IS ON TF OF GLUCERNA AT 55 ML/HR.
IS ON NPH INSULIN 22 U Q12HRS AND NOVOLOG Q4HRS SLIDING SCALE.
BLOOD SUGARS ARE BETTER.
NO HYPOGLYCEMIA.
CONTINUE WITH THE CURRENT INSULIN REGIMEN.

Category: Medical

- (2) Hypothyroid:
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/28/22 05:17
TSH	0.513 L

IS ON LT4 AT 0.112 MG DAILY.
Category: Medical

Subjective

Subjective: Progress Note Date: 11/20/22 Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
IS ON TF OF GLUCERNA AT 55 ML/HR.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of brain:

Status: Acute

Assessment and Plan:

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage

q1h neurochecks while in ICU

EVD output at 15cm H2O was <30cc/24h; will clamp today

CTH AM to assess for hydrocephalus and determine if patient will need a shunt

Continue Foley catheter due to urinary retention

Na goal 135-145

SBP <160

Plts >100,000

INR<1.5

HOB 30 degrees

Chemical DVT ppx

Continue levothyroxine 112ug daily

Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No acute events overnight. EVD raised to 15cm H2O yesterday.

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- per Neurosurgery, still need the EVD it's at 15 now, if she fails weaning, then she may need a VP

shunt

- vitals and labs are otherwise stable
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs

Hypothyroidism

- on Synthroid

Renal function back to baseline

- Will continue to monitor

UTI

- s/p IV abx

hyponA

- resolved

DVT prophylaxis

more than 35 min time spent on this pt

Internal Medicine - PN: Subj

Subjective

Interval history:
X COVER SCHN

no acute events

ICU

EVD at 15. Management per Neurosurgery.

Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,

EVD management per Neurosurgery

Status post trach and PEG

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

EVD at 15. Management per Neurosurgery.
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,
EVD management per Neurosurgery
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Palliative care follow-up
Placement planning pending removal of EVD

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE
Interval history:
Patient remains mechanical ventilation.

- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- per Neurosurgery, still need the EVD it's at 5 now, if she fails weaning, then she may need a VP

shunt

- vitals and labs are otherwise stable
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs

Hypothyroidism

- on Synthroid

Renal function back to baseline

- Will continue to monitor

UTI

- s/p IV abx

hyponA

- resolved

DVT prophylaxis

more than 35 min time spent on this pt

Internal Medicine - PN: Subj

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- per Neurosurgery, still need the EVD it's at 5 now, if she fails weaning, then she may need a VP

shunt

- vitals and labs are otherwise stable
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs

Hypothyroidism

- on Synthroid

Renal function back to baseline

- Will continue to monitor

UTI

- s/p IV abx

DVT prophylaxis

more than 35 min time spent on this pt

Subjective

Exam

Narrative

Exam Narrative:

Exam Narrative:

General: Intermittently Responsive with tactile stimulation

ENT: Left eye sluggish with pupillary response. Tracheostomy in place

Neck: Normal inspection. Full range of motion.

Respiratory: Mechanical breath sounds, otherwise lungs sound clear

Cardiovascular: Regular rate and rhythm. S1S2 present.

Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present. G-tube in place, no bleeding.

Extremities: Normal appearance.

Neuro: Seems to be moving her right extremities

Assessment and Plan

Assessment and plan

(1) Colloid cyst of brain:

Status: Acute

Assessment and Plan:

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage

q1h neurochecks while in ICU

EVD output at 5cm H2O was only 48cc overnight and 17cc thus far today. This is less than half the drainage at 0cm H2O. I will continue EVD @5cm H2O today with plans to raise or clamp tomorrow depending on output

Continue Foley catheter

Na goal 135-145

SBP <160

Plts >100,000

INR <1.5

HOB 30 degrees

Chemical DVT ppx

Continue levothyroxine 112ug daily

Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No acute events overnight. Raised EVD to 5cm H2O yesterday after baseline CTH performed. Foley catheter was removed but patient retained urine and it had to be replaced

Imaging

CT scan - head:

My impression:

Stable position of EVD. There is still residual intraventricular blood in the occipital horns. Stable encephalomalacia without evidence of new intracranial process

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

plan
EVD management per Neurosurgery. Re-evaluate clamping this week. If fails will likely need a VP shunt.
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,
EVD management per Neurosurgery
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Palliative care follow-up
Placement planning pending removal of EVD

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE
Interval history:
remain on vent EVD @ 5

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- per Neurosurgery, will try to wean off EVD again this week, if she fails, then she may need a VP

shunt

- vitals and labs are otherwise stable
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs

Hypothyroidism

- on Synthroid

Renal function back to baseline

- Will continue to monitor

UTI

- s/p IV abx

DVT prophylaxis

more than 35 min time spent on this pt

Exam

Narrative

Exam Narrative:

Exam Narrative:

General: Intermittently Responsive with tactile stimulation

ENT: Left eye sluggish with pupillary response. Tracheostomy in place

Neck: Normal inspection. Full range of motion.

Respiratory: Mechanical breath sounds, otherwise lungs sound clear

Cardiovascular: Regular rate and rhythm. S1S2 present.

Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present. G-tube in place, no bleeding.

Extremities: Normal appearance.

Neuro: Seems to be moving her right extremities

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

plan
EVD management per Neurosurgery. Re-evaluate clamping this week. If fails will likely need a VP shunt.
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,
EVD management per Neurosurgery
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Palliative care follow-up
Placement planning pending removal of EVD

Subjective

Subjective

Interval history:
Remains mechanical ventilation

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

plan
EVD management per Neurosurgery. May warrant a VP shunt.
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,
EVD management per Neurosurgery
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Palliative care follow-up
Placement planning pending removal of EVD

Subjective

Subjective

Interval history:
Remains on EVD. No change in neuro status. On vent.

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Plan

Colloid cyst of the third ventricle with Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- per Neurosurgery, will try to wean off EVD again this week, if she fails, then she may need a VP

shunt

- vitals and labs are otherwise stable
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm type 2 with hyperglycemia

- endocrine following f/u recs

Hypothyroidism

- on Synthroid

Renal function back to baseline

- Will continue to monitor

UTI

- s/p IV abx

Assessment and Plan

Assessment and plan

(1) Colloid cyst of brain:

Status: Acute

Assessment and Plan:

61F third ventricular colloid cyst and hydrocephalus s/p endoscopic resection w/ post-operative significant IVH and brainstem hemorrhage

q1h neurochecks while in ICU

Patient has failed EVD wean last week; output at 10cm H2O was only 48cc overnight so will drop EVD to 0cm H2O for several days to attempt to clear the residual IVH and then try weaning again; if patient fails again then she will need a shunt

Na goal 135-145

SBP <160

Plts >100,000

INR <1.5

HOB 30 degrees

Chemical DVT ppx

Continue levothyroxine 112ug daily

Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No acute events overnight

Imaging

CT scan - head:

My impression:

Communicating hydrocephalus similar to CTH on 11/10. Stroke territory is evident in the left midbrain and pons. Small residual IVH in the bilateral occipital horns

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

plan
d/w neurosurgery will eval when to re-clamp EVD
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,
EVD management per Neurosurgery
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Palliative care follow-up
Placement planning pending removal of EVD

Subjective

Subjective

Interval history:
remain on vent with EVD no change in neuro

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

<Sharon Stannislaus, PA-C - Last Filed: 11/13/22 14:14>

Assessment and plan

(1) Intraventricular hemorrhage:

Status: Acute

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst s/p endoscopic resection. Poor overall prognosis due to brainstem hemorrhage.

POD # 18

- patient has failed the EVD wean and clamp trial x1. Will wait till next week before trying again. If patient fails she may need a ventriculoperitoneal shunt
- EVD is working with drainage and has a good waveform. Currently ICPs are 6-7
- Cont EVD at 10cmH20
- Repeat CT in am
- HOB at 30
- Maintain SBP 100-140
- continue supportive care
- DVT prophylaxis - Lovenox 40mg subq
- Category: Medical

<Richard M Young, MD - Last Filed: 11/13/22 21:48>

Assessment and plan

(1) Intraventricular hemorrhage:

Plan

I agree with the assessment and plan.

Subjective

<Sharon Stannislaus, PA-C - Last Filed: 11/13/22 14:14>

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No acute issues overnight. No ICP issues

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle
Intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted

Emanate Health Queen of the Valley Hospital
Patient: Lyons, Kathleen A **Date of Birth:** 07/13/1961

Med/Rec Number: MR01483046 **Account Number:** QH0054940416 **Internal Med Progress Note**

- repeat CT demonstrated enlarging ventricles, so EVD reopened at 10 cmH2O by Neurosurgery
- per Neurosurgery, will try to wean off EVD again next week, if she fails, then she may need a VP shunt
- vitals and labs are otherwise stable
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm2 with hyperglycemia

- endocrine following
- on blood sugars better controlled, transition to NPH 33 units q.12 hours

Hypothyroidism

- on Synthroid

Renal function back to baseline

Will continue to monitor sodium level

- discontinue lisinopril, remains relatively normotensive, will add hydralazine if needed

UTI

- continue Rocephin and Vancomycin - DC antibiotics after today

Internal Medicine - PN: Subj

Subjective

Interval history:

No changes overnight, no improvement in overall mental status, EVD still at 10 cmH2O

Exam

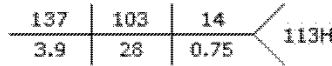

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intermittently Responsive with tactile stimulation
 ENT: Left eye sluggish with pupillary response. Tracheostomy in place
 Neck: Normal inspection. Full range of motion.
 Respiratory: Mechanical breath sounds, otherwise lungs sound clear
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present. G-tube in place, no bleeding.
 Extremities: Normal appearance.
 Neuro: Seems to be moving her right extremities

Assessment and Plan

Assessment and plan

(1) Intraventricular hemorrhage:

Status: Acute

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst s/p endoscopic resection. Poor overall prognosis due to brainstem hemorrhage.

- patient has failed the EVD wean and clamp trial x1. Will wait till next week before trying again. If patient fails she may need a ventriculoperitoneal shunt
- EVD is working with drainage and has a good waveform. Currently ICPs are 3-4.
- HOB at 30
- Maintain SBP 100-140
- continue supportive care
- DVT prophylaxis - Lovenox 40mg subq
Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No acute issues overnight. No ICP issues overnight.

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle

Intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD

- keep SBP 100-140

-neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative

care consulted

- repeat CT demonstrated enlarging ventricles, so EVD reopened at 10 cmH2O by Neurosurgery
- per Neurosurgery, will try to wean off EVD again next week, if she fails, then she may need a VP shunt
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm2 with hyperglycemia

- endocrine following
- on blood sugars better controlled, transition to NPH 30 units q.12 hours

Hypothyroidism

- on Synthroid

Renal function back to baseline

Will continue to monitor sodium level

- discontinue lisinopril, remains relatively normotensive, will add hydralazine if needed

UTI

- continue Rocephin and Vancomycin - likely can DC antibiotics on 11/13

Internal Medicine - PN: Subj

Subjective

Interval history:

Patient failed an attempt to wean off from the EVD

Otherwise no new changes

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intermittently Responsive with tactile stimulation
 ENT: Left eye sluggish with pupillary response. Tracheostomy in place
 Neck: Normal inspection. Full range of motion.
 Respiratory: Mechanical breath sounds, otherwise lungs sound clear
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present. G-tube in place, no bleeding.
 Extremities: Normal appearance.
 Neuro: Seems to be moving her right extremities

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

plan
EVD per Neurology
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,
EVD management per Neurosurgery
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Palliative care follow-up

Assessment and Plan

Assessment and plan

(1) Intraventricular hemorrhage:

Status: Acute

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst s/p endoscopic resection. Poor overall prognosis due to brainstem hemorrhage.

- patient has failed the EVD wean and clamp trial x1. Will wait till next week before trying again. If patient fails she may need a ventriculoperitoneal shunt
 - HOB at 30
 - Maintain SBP 100-140
 - continue supportive care
 - DVT prophylaxis - Lovenox 40mg subq
- Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No acute issues overnight.

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle

Intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative

care consulted

- repeat CT demonstrated enlarging ventricles, so EVD reopened at 10 cmH2O by Neurosurgery
- now with tracheostomy and G-tube
- LTAC once weaned off EVD

Dm2 with hyperglycemia

- endocrine following
- on blood sugars better controlled, transition to NPH 30 units q.12 hours

Hypothyroidism

- on Synthroid

Renal function back to baseline

Will continue to monitor sodium level

- discontinue lisinopril, remains relatively normotensive, will add hydralazine if needed

UTI

- continue Rocephin and Vancomycin - likely can DC antibiotics on 11/13

Internal Medicine - PN: Subj

Subjective

Interval history:

Patient with EVD still in place, drain reepend due to enlarging ventricle at 10cm H2O

Overall neurologic condition is the same

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intermittently Responsive with tactile stimulation
 ENT: Left eye sluggish with pupillary response. Tracheostomy in place
 Neck: Normal inspection. Full range of motion.
 Respiratory: Mechanical breath sounds, otherwise lungs sound clear
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present. G-tube in place, no bleeding.
 Extremities: Normal appearance.
 Neuro: Seems to be moving her right extremities

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

urine culture growing Enterobacter and Staph epi, continue Bactrim, on vancomycin for the Staph epidermidis
CT head reviewed EVD now unclamped
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right,
EVD management per Neurosurgery p
Status post trach and PEG
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Palliative care follow-up

Exam

Narrative

Exam Narrative:
 HEENT: PALE. HAS VENTRICULOSTOMY AGAIN.
 NECK: HAS TRACH
 LUNG: RHONCHI
 HEART: NORMAL S1, S2 NO MUR MUR.
 ABDOMEN: SOFT, NON TENDER.
 EXTREMITY: NO EDEMA.

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle

Intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative

care consulted

- repeat CT demonstrated enlarging ventricles, so EVD reopened at 10 cmH2O by Neurosurgery
- completed tracheostomy, planned for G-tube
- LTAC once weaned off EVD

Dm2 with hyperglycemia

- endocrine following
- on blood sugars better controlled, transition to NPH 30 units q.12 hours

Hypothyroidism

- on Synthroid

Renal function back to baseline

Will continue to monitor sodium level

- discontinue lisinopril, remains relatively normotensive, will add hydralazine if needed

UTI

- continue Rocephin and Vancomycin

Internal Medicine - PN: Subj

Subjective

Interval history:

Status post tracheostomy yesterday

No acute events overnight, overall doing about the same in regards to mentation

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Responsive with tactile stimulation, intubated, following basic commands
 ENT: Left eye sluggish with pupillary response. ET tube in place
 Neck: Normal inspection. Full range of motion.
 Respiratory: Mechanical breath sounds, otherwise lungs sound clear
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Extremities: Normal appearance.
 Neuro: Seems to be moving her right extremities

Assessment and Plan

<Sharon Stannislaus, PA-C - Last Filed: 11/10/22 16:19>

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical

<Richard M Young, MD - Last Filed: 11/10/22 17:04>

Assessment and plan

- (1) Intraventricular hemorrhage:
Assessment and Plan:
61F w/ obstructive hydrocephalus from a colloid cyst s/p endoscopic resection.

- rpt head CT in the AM shows enlarging ventricles. will reopen drain at 10cmH20
- HOB at 30
- Maintain SBP 100-140
- Poor overall prognosis due to brainstem hemorrhage.

Subjective

<Sharon Stannislaus, PA-C - Last Filed: 11/10/22 16:19>

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

urine culture growing Enterobacter and Staph epi, continue Bactrim, on vancomycin for the Staph epidermidis
Repeat CT head today
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, EVD management per Neurosurgery possible removal of EVD currently clamped
Awaiting PEG today
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Patient is status post tracheotomy. Continue routine trach care
Consider palliative care involvement

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/25/22 04:56
Hemoglobin A1c	7.9 H

IS NPO.
IS ON NPH INSULIN 30 U Q12HRS AND NOVOLOG Q4HRS SLIDING SCALE.
BLOOD SUGARS ARE BETTER.
HOLD NPH INSULIN WHILE FEEDING IS ON HOLD.
CONTINUE WITH THE CURRENT NOVOLOG SLIDING SCALE.

Category: Medical
(2) Hypothyroid:
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/28/22 05:17
TSH	0.513 L

IS ON LT4 AT 0.112 MG DAILY.
Category: Medical

Subjective

Subjective: Progress Note Date: 11/10/22 Principal diagnosis: IRDM/HYPOTHYROID/RESP
FAILURE Interval history:
NPO FOR PEG PLACEMENT.

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle

Intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- discussed with patient's sister at bedside on 11/5 regarding patient's status and that she will likely

need trach/peg, she states that the patient's family does want to pursue trach/peg
- disability form filled per note on 11/4, awaiting surgical ICD code
-going for tracheostomy today and likely G-tube tomorrow

Dm2 with hyperglycemia

- endocrine following
- on blood sugars better controlled, transition to NPH 30 units q.12 hours

Hypothyroidism

- on Synthroid

Renal function back to baseline

Will continue to monitor sodium level

- discontinue lisinopril, remains relatively normotensive, will add hydralazine if needed

UTI

- continue Rocephin and Vancomycin

Internal Medicine - PN: Subj

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Responsive with tactile stimulation, intubated, following basic commands
 ENT: Left eye sluggish with pupillary response. ET tube in place
 Neck: Normal inspection. Full range of motion.
 Respiratory: Mechanical breath sounds, otherwise lungs sound clear
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Extremities: Normal appearance.
 Neuro: Seems to be moving her right extremities

Assessment and Plan

<Sharon Stannislaus, PA-C - Last Filed: 11/09/22 16:02>

Assessment and plan

(1) Intraventricular hemorrhage:
Status: Acute
Category: Medical

<Richard M Young, MD - Last Filed: 11/10/22 15:38>

Assessment and plan

(1) Intraventricular hemorrhage:
Assessment and Plan:
61F w/ obstructive hydrocephalus from a colloid cyst s/p endoscopic resection.

- rpt head CT in the AM shows enlarging ventricles. will reopen drain at 10cmH20
- HOB at 30
- Maintain SBP 100-140
- Poor overall prognosis due to brainstem hemorrhage.

Subjective

<Sharon Stannislaus, PA-C - Last Filed: 11/09/22 16:02>

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE
Interval history:
No acute issues overnight. Got tracheostomy today. neuro status unchanged

Vital Signs

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

urine culture growing Enterobacter and Staph epi, continue Bactrim, on vancomycin for the Staph epidermidis
Repeat CT head today
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, EVD management per Neurosurgery
Awaiting PEG tomorrow
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Patient is status post tracheotomy. Continue routine trach care
Consider palliative care involvement

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/25/22 04:56
Hemoglobin A1c	7.9 H

IS ON TF OF GLUCERNA AT 45 ML/HR.
IS ON NPH INSULIN 30 U Q12HRS AND NOVOLOG Q4HRS SLIDING SCALE.
BLOOD SUGARS ARE BETTER.
HOLD NPH INSULIN TONIGHT AND TOMORROW TILL POST TRACH AND FEEDING RESUMES.
CONTINUE WITH THE CURRENT NOVOLOG SLIDING SCALE.

Category: Medical
(2) Hypothyroid:
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/28/22 05:17
TSH	0.513 L

IS ON LT4 AT 0.112 MG DAILY.
Category: Medical

Subjective

Subjective: Progress Note Date: 11/08/22 Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
IS ON TF OF GLUCERNA AT 45 ML/HR.
NPO PAST MIDNIGHT FOR TRACH IN AM.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:

Status: Inactive

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst s/p endoscopic resection.

- rpt head CT in the AM shows stable IVH and ICH. Acute blood is now subacute.
 - will try to wean EVD, raise to 20mmHg today, open to drain
 - HOB at 30
 - Maintain SBP 100-140
 - Poor overall prognosis due to brainstem hemorrhage.
 - Patient will Trach/PEG for continued long term support. Trache 11/9, Peg 11/10
- Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No acute issues overnight. ICPs 6-9

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

urine culture growing Enterobacter and Staph epi, continue Bactrim, on vancomycin for the Staph epidermidis
Repeat CT head today
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, EVD management per Neurosurgery
Likely will need trach and PEG once medically stable, likely once the EVD has been removed
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Status post goals of care discussion with the family, leaning towards trach and PEG
Consider palliative care involvement

Plan

Colloid cyst of the third ventricle

Intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- discussed with patient's sister at bedside on 11/5 regarding patient's status and that she will likely

Emanate Health Queen of the Valley Hospital
Patient: Lyons, Kathleen A **Date of Birth:** 07/13/1961

Med/Rec Number: MR01483046 **Account Number:** QH0054940416 **Internal Med Progress Note**

need trach/peg, she states that the patient's family does want to pursue trach/peg
- disability form filled per note on 11/4, awaiting surgical ICD code
- consulting GI and General surgery for trach/G-tube placement

Dm2 with hyperglycemia
- endocrine following
- on NPH 37u q8h

Hypothyroidism
- on Synthroid

SCr downtrending
- DC'd free water flushes
- Hyperkalemia, hyponatremia, and slight Scr increase - likely from bactrim - will DC as patient is on rocephin and vancomycin for now for her UTi
- Renal US was grossly unremarkable for any acute pathology
- discontinue lisinopril, remains relatively normotensive, will add hydralazine if needed

UTI
- **continue Rocephin and Vancomycin**

GI: Famotidine for GI prophylaxis
Tolerating Glucerna with water flushes via NG tube

Internal Medicine - PN: Subj

Subjective

Interval history:
follows commands, able to move mostly her right side, still somnolent

Assessment and Plan

Assessment and plan

- (1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/25/22 04:56
Hemoglobin A1c	7.9 H

IS ON TF OF GLUCERNA AT 45 ML/HR.
IS ON NPH INSULIN 37 U Q8HRS AND NOVOLOG Q4HRS SLIDING SCALE.
BLOOD SUGARS ARE LOWER.
DECREASE THE NPH INSULIN TO 30 U Q12HRS.
CONTINUE WITH THE CURRENT NOVOLOG SLIDING SCALE.
BMP IN AM.

Category: Medical

- (2) Hypothyroid:
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/28/22 05:17
TSH	0.513 L

IS ON LT4 AT 0.112 MG DAILY.
Category: Medical

Subjective

Subjective: Progress Note Date: 11/07/22 Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
IS ON TF OF GLUCERNA AT 45 ML/HR.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:

Status: Inactive

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst s/p endoscopic resection.

- rpt head CT in the AM, last head CT was 10/31
 - will try to wean EVD.
 - HOB at 30
 - Maintain SBP 100-140
 - Poor overall prognosis due to brainstem hemorrhage.
 - Patient will Trach/PEG for continued long term support. Dr. Ye discussed with family goals of care.
- Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No acute issues overnight.

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle

Intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- discussed with patient's sister at bedside on 11/5 regarding patient's status and that she will likely

Med/Rec Number: MR01483046 Account Number: QH0054940416 Internal Med Progress Note

need trach/peg, she states that the patient's family does want to pursue trach/peg
- disability form filled per note on 11/4, awaiting surgical ICD code
- consulting GI and General surgery for trach/G-tube placement

Dm2 with hyperglycemia
- endocrine following
- on NPH 37u q8h

Hypothyroidism
- on Synthroid

Hypernatremia, resolved
Hyponatremia
Elevated Creatinine
Decreased UOP
- DC'd free water flushes
- Renal US was grossly unremarkable for any acute pathology
- discontinue lisinopril, remains relatively normotensive, will add hydralazine if needed

UTI
- **continue Rocephin and Vancomycin**

GI: Famotidine for GI prophylaxis
Tolerating Glucerna with water flushes via NG tube

Internal Medicine - PN: Subj

Subjective

Interval history:

No major change regarding neuro status since my last evaluation about 1 week ago, patient remains quite somnolent, not moving her left side

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Responsive with tactile stimulation, otherwise intubated, does not follow command
 ENT: Left eye dilated to 5 millimeters since postop, sluggish with pupillary response. ET tube in place
 Neck: Normal inspection. Full range of motion.
 Respiratory: Mechanical breath sounds, otherwise lungs sound clear
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Extremities: Normal appearance. Full range of motion.
 Neuro: Seems to be moving her right extremities, not yet following commands

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

urine culture growing Enterobacter and Staph epi, continue Bactrim, on vancomycin for the Staph epidermidis
CT head is stable, improving hydrocephalus, stable hemorrhage
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, with triple flex on the left lower
EVD in place per Neurosurgery, ICPs have been low, Weaning per Neurosurgery, at 5 centimeters
Minimal vent settings
Likely will need trach and PEG once medically stable, likely once the EVD has been removed
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Status post goals of care discussion with the family, leaning towards trach and PEG
Consider palliative care involvement

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:

Status: Inactive

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst POD #10 s/p endoscopic resection complicated by intraventricular hemorrhage

- Neuroexam a little improved

-Raise EVD to OTD @ 10 cm H2O. Will attempt to wean off

-HOB at 30

-Maintain SBP 100-140

-Poor overall prognosis. Patient will likely require Trach/PEG. Need to discuss with family goals of care.

-Palliative care consultation

Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No overnight events. Pt remains intubated. Temp 99.7. WBC elevated and trending down from 12.8 to 12.7. On Bactrim and Vanco for UTI.

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle

Intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- **discussed with patient's sister at bedside on 11/5 regarding patients status and that she**

Med/Rec Number: MR01483046 Account Number: QH0054940416 Hospitalist - Progress Note

will likely need trach/peg, she states that the patient's family does want to pursue trach/peg

- disability form filled per note on 11/4, awaiting surgical ICD code

Dm2 with hyperglycemia

- endocrine following
- on NPH 35u q8h

Hypothyroidism

- on Synthroid

Hypernatremia, resolved

Hyponatremia

Elevated Creatinine

Decreased UOP

- DC'd free water flushes
- **Renal US ordered**

HTN

- continue lisinopril and amlodipine

UTI

- **continue Bactrim and Vancomycin**

GI: Famotidine for GI prophylaxis

Tolerating Glucerna with water flushes via NG tube

Dispo: likely need trach and peg once EVD out and LTACH

Subjective

Subjective

Interval history:

Patient seen and examined at the bedside this morning. No acute events overnight per bedside RN. Patient continues to be unresponsive. Spontaneously moving bilateral lower extremities and right upper extremity, not left upper extremity. Renal ultrasound ordered for worsening creatinine.

Vital Signs

Vital Signs

Sepsis Action Taken by Nursing	No Action Required	11/06/22 08:00

Exam

Const

Other:

Female patient, lying in bed, intubated and not sedated, however patient is unresponsive

HENMT

Other:

Dressing in place, clean/dry/intact; right pupil is approximately 3 millimeters and reactive to light, left pupil is approximately 6 millimeters and sluggish but still reactive; feeding tube in place, tube feeds running

Resp

Other:

Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Other:

Regular rate and rhythm, S1/S2 present

GI

Other:

Abdomen is soft, nontender, bowel sounds heard

Neuro

Other:

Intubated and not sedated, not responsive to verbal or painful stimuli, spontaneously moving bilateral lower extremities and right upper extremity, not left upper extremity

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

10/29. Patient remains on mechanical ventilation off all sedation. Able to squeeze the right hand with command. Unable to open her eyes.

10/30 remains mechanical ventilation off sedation EVD placed no change in neuro status

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

urine culture growing Enterobacter and Staph epi, continue Bactrim, on vancomycin for the Staph epidermidis
CT head is stable, improving hydrocephalus, stable hemorrhage
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, with triple flex on the left lower
EVD in place per Neurosurgery, ICPs have been low, Weaning per Neurosurgery, at 5 centimeters
Minimal vent settings
Likely will need trach and PEG once medically stable, likely once the EVD has been removed
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Status post goals of care discussion with the family, leaning towards trach and PEG

Assessment and Plan

Assessment and plan

- (1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/25/22 04:56
Hemoglobin A1c	7.9 H

IS ON TF OF GLUCERNA AT 45 ML/HR.
IS ON NPH INSULIN 37 U Q8HRS AND NOVOLOG Q4HRS SLIDING SCALE.
BLOOD SUGARS ARE BETTER.
CONTINUE WITH THE CURRENT INSULIN REGIMEN.
BMP IN AM.

Category: Medical

- (2) Hypothyroid:
Status: Acute
Assessment and Plan:

Laboratory Tests

	10/28/22 05:17
TSH	0.513 L

IS ON LT4 AT 0.112 MG DAILY.
Category: Medical

Subjective

Subjective: Progress Note Date: 11/06/22 Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
IS ON TF OF GLUCERNA AT 45 ML/HR.

Plan

Colloid cyst of the third ventricle
intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- neurosurgery on board, continue EVD, goal to wean off; anticipated long road to recovery, palliative care consulted
- **discussed with patient's sister at bedside today regarding patients status and that she will**

Emanate Health Queen of the Valley Hospital
Patient: Lyons, Kathleen A Date of Birth: 07/13/1961

Med/Rec Number: MR01483046 Account Number: QH0054940416 Hospitalist - Progress Note

likely need trach/peg, she states that the patient's family does want to pursue trach/peg
- disability form filled per note on 11/4, awaiting surgical ICD code

Dm2 with hyperglycemia
- endocrine following
- on NPH 35u q8h

Hypothyroidism
- on Synthroid

Hypernatremia, resolved
- dropping sodium, decreased free water flushes to 100 cc/q6 from today

HTN
- continue lisinopril and amlodipine

New fever
UTI
- continue Bactrim, start Vancomycin for resistant staph epidermis from today

GI: Famotidine for GI prophylaxis
Tolerating Glucerna with water flushes via NG tube

Dispo: likely need trach and peg once EVD out and LTACH

Subjective

Subjective

Interval history:

Patient seen examined at the bedside in the intensive care unit this morning. Patient's sister at bedside. Per bedside RN no acute events overnight. Patient still draining from the EVD. Patient is still unresponsive and not following commands. Patient is intubated and not sedated.

Exam

Const

Other:

Female patient, lying in bed, intubated and not sedated

HENMT

Other:

Dressing in place, clean/dry/intact; right pupil is approximately 3 millimeters and reactive to light, left pupil is approximately 6 millimeters and sluggish but still reactive; feeding tube in place, tube feeds running

Resp

Other:

Mechanically ventilated, coarse breath sounds in bilateral upper lobes

Cardio

Other:

Regular rate and rhythm, S1/S2 present

GI

Other:

Abdomen is soft, nontender, bowel sounds are heard

Neuro

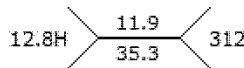

Other:

Intubated and not sedated, not responsive to verbal or painful stimuli

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:

Status: Inactive

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst POD #9 s/p endoscopic resection complicated by intraventricular hemorrhage

- Neuro unchanged

-Raise EVD to OTD @ 5 cm H2O. Will attempt to wean off

-HOB at 30

-Maintain SBP 100-140

-Poor overall prognosis. Patient will likely require Trach/PEG. Need to discuss with family goals of care.

-Palliative care consultation

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

10/29. Patient remains on mechanical ventilation off all sedation. Able to squeeze the right hand with command. Unable to open her eyes.

10/30 remains mechanical ventilation off sedation EVD placed no change in neuro status

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

urine culture growing Enterobacter and Staph epi, continue Bactrim, consider adding on vancomycin the Staph epidermidis

CT head is stable, improving hydrocephalus, stable hemorrhage

Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, with triple flex on the left lower

EVD in place per Neurosurgery, ICPs have been low, currently set at 0 CM

Minimal vent settings

Likely will need trach and PEG once medically stable, likely once the EVD has been removed

Assessment and Plan

Assessment and plan

- (1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

10/29. Patient remains on mechanical ventilation off all sedation. Able to squeeze the right hand with command. Unable to open her eyes.
10/30 remains mechanical ventilation off sedation EVD placed no change in neuro status

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME
UTI

Urine culture growing DNR is in GPCs, continue Bactrim, follow-up sensitivities and final results
CT head is stable, improving hydrocephalus, stable hemorrhage
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, with triple flex on the left lower
EVD in place per Neurosurgery, ICPs have been low, currently set at 0 CM
Minimal vent settings
Likely will need trach and PEG once medically stable, likely once the EVD has been removed
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis
Status post goals of care discussion with the family, leaning towards trach and PEG

I spent 31 minutes of Critical Care Time with this patient. This does not include time spent on separately reported billable procedure.

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle
intraventricular hemorrhage
- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- Anticipated long road to recovery, palliative care consulted
- fill out disability form today pending surgical icd code

Med/Rec Number: MR01483046 Account Number: QH0054940416 Internal Med Progress Note

Dm2 with hyperglycemia
- endocrine following
- on NPH 35u q8h

Hypothyroidism
- on Synthroid

hypernatremia
- resolved with increasing free water flush

HTN
- Lisinopril
- add amlodipine 5 milligram p.o. daily for better blood pressure control

New fever
UTI
- start bactrim bid for UTI

GI: Famotidine for GI prophylaxis
Tolerating Glucerna with water flushes via NG tube

dispo: likely need trach and peg once EVD out

Internal Medicine - PN: Subj

Subjective

Interval history:
NO change overnight.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

10/29. Patient remains on mechanical ventilation off all sedation. Able to squeeze the right hand with command. Unable to open her eyes.
10/30 remains mechanical ventilation off sedation EVD placed no change in neuro status

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME

CT head is stable, improving hydrocephalus, stable hemorrhage
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, with triple flex on the left lower
EVD in place per Neurosurgery, ICPs have been low, currently set at 0 CM
Minimal vent settings
Likely will need trach and PEG once medically stable, likely once the EVD has been removed
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis

I spent 31 minutes of Critical Care Time with this patient. This does not include time spent on separately reported billable procedure.

Exam

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:

Status: Inactive

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst POD #7 s/p endoscopic resection complicated by intraventricular hemorrhage

- Neuro unchanged
- F/U CT Brain from today shows improving IVH with normal ventricular size. No new hemorrhage
- Continue EVD open at 0. will start to wean in next few days
- HOB at 30
- Maintain SBP 100-140
- Poor overall prognosis. Patient will likely require Trach/PEG. Need to discuss with family goals of care.
- Palliative care consultation
Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No overnight events. Neuro unchanged

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical

Plan

10/29. Patient remains on mechanical ventilation off all sedation. Able to squeeze the right hand with command. Unable to open her eyes.
10/30 remains mechanical ventilation off sedation EVD placed no change in neuro status

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME

CT head is stable, improving hydrocephalus, stable hemorrhage
Not on sedation, mental status remains poor just withdraws to painful stimuli on the right, with triple flex on the left
EVD in place per Neurosurgery, ICPs have been low, currently set at 0 CM
Minimal vent settings
Likely will need trach and PEG once medically stable, likely once the EVD has been removed
Systolic blood pressure less than 140, Cardene/labetalol as needed
SCDs for thromboprophylaxis

I spent 31 minutes of Critical Care Time with this patient. This does not include time spent on separately reported billable procedure.

Exam

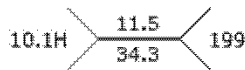

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Inactive
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Inactive
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Inactive
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle
intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- Anticipated long road to recovery, palliative care consulted
- will fill out disability form

Dm2 with hyperglycemia
- endocrine following
- on NPH

Hypothyroidism
- on Synthroid

hypernatremia
- resolved with increasing free water flush
- stop IVF

HTN
- Lisinopril
- add amlodipine 5 milligram p.o. daily for better blood pressure control

New fever
- infectious workup

GI: Famotidine for GI prophylaxis
Tolerating Glucerna with water flushes via NG tube

dispo: likely need trach and peg

Internal Medicine - PN: Subj

Subjective

Interval history:
Patient seen and examined. No change from yesterday.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:

Status: Acute

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst POD #6 s/p endoscopic resection complicated by intraventricular hemorrhage

- Neuro unchanged
 - F/U CT Brain from today shows improving IVH with normal ventricular size. No new hemorrhage
 - Continue EVD open at 0. will start to wean in next few days
 - HOB at 30
 - Maintain SBP 100-140
 - Poor overall prognosis. Patient will likely require Trach/PEG. Need to discuss with family goals of care.
 - Palliative care consultation
- Category: Medical

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No overnight events. Neuro unchanged

Assessment and Plan

Assessment and plan

- (1) Intraventricular hemorrhage:
Status: Acute
Category: Medical
- (2) Hydrocephalus:
Status: Acute
Category: Medical
- (3) Colloid cyst of third ventricle:
Status: Acute
Category: Medical
- (4) Hyponatremia:
Status: Acute
Category: Medical
- (5) Diabetes mellitus due to underlying condition, uncontrolled, with hyperglycemia:
Status: Acute
Category: Medical
- (6) Memory loss:
Status: Acute
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle
intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- Anticipated long road to recovery, Dr Batou has updated patient's sister, filled out disability forms for the patient

Med/Rec Number: MR01483046 Account Number: QH0054940416 Internal Med Progress Note

Dm2 with hyperglycemia
- endocrine following
- on NPH

Hypothyroidism
- on Synthroid

hypernatremia
- resolved with increasing free water flush
- stop IVF

HTN
- Lisinopril
- add amlodipine 5 milligram p.o. daily for better blood pressure control

GI: Famotidine for GI prophylaxis
Tolerating Glucerna with water flushes via NG tube

dispo: likely need trach and peg

Internal Medicine - PN: Subj

Subjective

Interval history:

Patient seen and examined. There is no significant change from yesterday.

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Acute
Category: Medical

Plan

10/29. Patient remains on mechanical ventilation off all sedation. Able to squeeze the right hand with command. Unable to open her eyes.
10/30 remains mechanical ventilation off sedation EVD placed no change in neuro status

Acute hypoxic respiratory failure
Obstructive hydrocephalus from colo insist
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME

CT head is stable, improving hydrocephalus, stable hemorrhage
Not on sedation, mental status remains poor
EVD in place per Neurosurgery, ICPs have been low, currently set at 0 CM
Minimal vent settings
Likely will need trach and PEG once medically stable
Systolic blood pressure less than 140, Cardene/labetalol
SCDs for thromboprophylaxis

I spent 31 minutes of Critical Care Time with this patient. This does not include time spent on separately reported billable procedure.

Exam

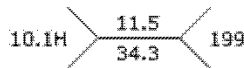

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:

Status: Acute

Assessment and Plan:

61F w/ obstructive hydrocephalus from a colloid cyst POD #5 s/p endoscopic resection complicated by intraventricular hemorrhage

- Neuro unchanged
- F/U CT Brain from today shows improving IVH with normal ventricular size. No new hemorrhage
- Continue EVD open at 0. will start to wean in next few days
- HOB at 30
- Maintain SBP 100-140
- Patient will likely require Trach/PEG

Category: Medical

Plan

6

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE

Interval history:

No overnight events. Neuro unchanged

Assessment and Plan

Assessment and plan

(1) Colloid cyst of third ventricle:
Status: Acute
Category: Medical

Plan

10/29. Patient remains on mechanical ventilation off all sedation. Able to squeeze the right hand with command. Unable to open her eyes.
10/30 remains mechanical ventilation off sedation EVD placed no change in neuro status

Acute hypoxic respiratory failure
Obstructive hydrocephalus due to tumor status post resection
Intraventricular hemorrhage with midbrain hemorrhage
Hyponatremia
Diabetes type 2
AME

CT head is stable, improving hydrocephalus, stable hemorrhage
Not on sedation, mental status remains poor
EVD in place per Neurosurgery, ICPs have been low, currently set at 0 CM
Minimal vent settings
Systolic blood pressure less than 140, Cardene/labetalol
SCDs for thromboprophylaxis
Continue IV fluids of NS at 50

I spent 31 minutes of Critical Care Time with this patient. This does not include time spent on separately reported billable procedure.

Exam

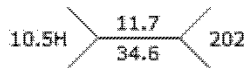

Narrative: Exam Narrative:
 Exam Narrative:
 General: Intubated orally
 ENT: Eyes are normal to inspection. MMM . PERRL dressing overhead EVD
 Neck: Normal inspection. Full range of motion.
 Respiratory: No respiratory distress. Breath sounds normal bilaterally. No rhonchi, wheezes, or crackles present.
 Cardiovascular: Regular rate and rhythm. S1S2 present.
 Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
 Neuro: Intubated off sedation left thigh 5 millimeters very sluggish to reactive to light right eye 1 millimeter reactive to light. Withdraws to painful stimuli on the left leg only. Does not follow commands

Status: Acute
Category: Medical
- (7) Hypothyroid:
Status: Acute
Category: Medical
- (8) Essential (primary) hypertension:
Status: Acute
Category: Medical

Plan

Colloid cyst of the third ventricle
intraventricular hemorrhage

- underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD
- keep SBP 100-140
- repeat CT head today
- Anticipated long road to recovery, Dr Batou has updated patient's sister, filled out disability forms for the patient

Dm2 with hyperglycemia
- endocrine following
- on NPH

Hypothyroidism
- on synthroid

HTN
- Lisinopril

dispo: likely need trach and peg

Internal Medicine - PN: Subj

Subjective

Interval history:

Return from CT. Still intubated. left arm withdrawal to pain. spontaneous movement seen in left leg, right arm and right leg.

Assessment and Plan

Assessment and plan

- (1) Colloid cyst of third ventricle:
Status: Acute
Category: Medical

Plan

- 61F w/ obstructive hydrocephalus, colloid cyst s/p endoscopic resection complicated by intraventricular hemorrhage
- Continue EVD open at 0
 - Repeat CT head on Monday
 - HOB at 30
 - Maintain SBP 100-140
 - Supportive care

Subjective

Subjective

Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE
Interval history:
No overnight events. EVD in place.

Vital Signs

Plan

10/30

Patient's vitals and labs grossly stable, leukocytosis continuing to downtrend
Still poorly responsive and not following commands, not moving her left side
Will follow recommendations from Neurosurgery, for now plan to do repeat CT scan tomorrow morning
Anticipated long road to recovery, updated patient's sister, filled out disability forms for the patient

10/29

Leukocytosis down trending, remains afebrile
More responsive, moving on command especially with her right side
Continue EVD monitoring, blood pressure control
Blood sugars much improved, transition to tube feeds, now on NPH insulin
Continue supportive care in the ICU, follow recommendations from Neurosurgery

10/28

Patient remains hemodynamically stable, is currently afebrile
Blood pressure is better, off Cardene drip

Emanate Health Queen of the Valley Hospital

Patient: Lyons, Kathleen A **Date of Birth:** 07/13/1961

Med/Rec Number: MR01483046 **Account Number:** QH0054940416 **Internal Med Progress Note**

Tolerating mechanical ventilation, holding on sedation to monitor patient's conscious and neurologic recovery

Otherwise continue EVD monitoring, appreciate assistance from Neurosurgery

Blood sugars much better with insulin drip, appreciate assistance from endocrinology

Worsening leukocytosis, suspect reactive postoperatively but will monitor closely

Updated patient's sister outside the ICU, all questions answered

10/27

Patient underwent right frontal endoscopic transventricular resection of colloid cyst, in addition to placement of an EVD

Remains intubated, in the ICU

Does retract to pain, left pupil is more dilated and sluggish since OR, will continue to monitor

Repeat CT head demonstrates stable intraventricular hemorrhage from her prior scan, In addition to SAH

-remains on nimodipine, nicardipine drip to maintain blood pressures

Low-grade fevers, suspect central/postoperative, but will monitor close

Continue supportive and respiratory care measures

Severely hyperglycemic, greatly appreciate assistance from endocrinology, will adjust basal/bolus insulin regiment, but for now will initiate a insulin drip

-appreciate assistance from endocrinology as well

10/26

Preop chest x-ray and labs remain stable and unremarkable

Patient is clinically stable and resting comfortably, she is NPO awaiting surgery

Will monitor the patient closely after her neurosurgical interventions, appreciate assistance from our specialists

10/25

Continue neuro checks, monitor the patient closely

Vitals and labs otherwise grossly stable

NPO midnight pending OR tomorrow with neurosurgery

10/24

Patient seems to be clinically and hemodynamically stable

Vitals and labs otherwise stable

No longer hypoglycemic, check A1c

Continue neuro checks and close monitoring

Plan for OR this Wednesday with neurosurgery

10/23

decrease PM Levemir from 20 to 10

explained to patient why we want to avoid hypoglycemia and importance of accurate neuro check , she stats understanding neurosurgery following , recommended :

- Neuro checks, monitor for increasing headaches, somnolence, risk for sudden death

- Continue supportive care

- Anticipate OR next Wednesday 10/26

AM labs

Internal Medicine - PN: Subj

Subjective

Interval history:

Patient remains hypersomnolent

Otherwise no new or acute changes

Exam

Narrative: Exam Narrative:
Exam Narrative:
General: Responsive with tactile stimulation, otherwise intubated, does not follow command
ENT: Left eye dilated to 5 millimeters since postop, sluggish with pupillary response.
ET tube in place
Neck: Normal inspection. Full range of motion.
Respiratory: Mechanical breath sounds, otherwise lungs sound clear
Cardiovascular: Regular rate and rhythm. S1S2 present.
Abdomen: The abdomen is soft and non-tender, non-distended. Active bowel sounds present.
Extremities: Normal appearance. Full range of motion.
Neuro: Seems to be moving extremities, not yet following commands

Assessment and Plan

Assessment and plan

(1) DM type 2 (diabetes mellitus, type 2):
Status: Acute
Category: Medical

Plan

ASSESSMENT:

Diabetes type 2 ID.
Hypothyroidism.
Acute hypoxic respiratory failure
Obstructive hydrocephalus due to cholestasis status post resection
Intraventricular hemorrhage with midbrain hemorrhage

PLANS:

Continue with present feeding.
Sliding scale.
Increase NPH 12 U Q8H.
Synthroid 112 mcg QD.

Subjective

Subjective: Principal diagnosis: IRDM/HYPOTHYROID/RESP FAILURE Interval history:
No hypoglycemia. On Tube feeding.
